

Solution Brief

Moravia Functional Testing Services

Your software needs to be reliable and predictable in all markets. You can't afford the alternative—if people struggle to use it, your brand will suffer, and users will abandon your product and choose a competitor's.

Moravia provides assurance that your software works as it should, in all languages, via our Functional Testing Services. Our engineers verify that the product functions as expected, regardless of whether it has been localized. This is often completed in the early stages of the product globalization lifecycle on the source language version.

The functional testing services we provide are:

- > **Pairwise testing** tests all possible discrete combinations for a pair of input parameters.
- > **Acceptance testing** considers user needs, requirements, and business processes, and is conducted to determine whether a system satisfies the acceptance criteria.
- > **Use-case testing** assesses the software in a real-world environment from the user's perspective.
- > **Stress testing** evaluates how a product behaves at or beyond the limits of its anticipated workloads.
- > **Load testing** assesses the product's functionality under certain "pressure" conditions (such as a high number of active users).
- > **Compatibility and interoperability testing** verifies that products will function as expected on a wide variety of hardware, software, and network configurations.
- > **Regression testing** tests a new release (or "drop") of the product, looking for previously fixed issues and bugs.

We maintain three secure testing labs: Brno, Czech Republic, Nanjing, China, and Monterey, CA. We can provide you with resources in-country, in our labs, or a mix of the two.
