

GoSecure Web Security is a set-it-and-forget-it secure web gateway solution that provides real time malware defense and the most accurate URL classification using our unique combination of automated intelligence and 100% human analysis. Deployed via an efficient cloud-hybrid platform, GoSecure Web Security is a highly effective and affordable solution to keep your critical data secure from even the most persistent cyber criminals.

Highlights

iGuard URL Service

- 100% Human-reviewed URL database
- Industry leading accuracy for lowest false positives and negatives

Anti-Virus

- Anti-virus scanning
- Real time data stream scanning of http and https traffic
- Zero day high-risk and infected URL feed
- Up to the minute updates

HTTPS Traffic

- TLS/SSL decryption for policy compliance
- Selective TLS interception and proxy with full content inspection
- SSL interception configurable via destination domain and/or IP

Layered Security

- Botnets detection and control on outbound reaches to CNCs
- Anti-circumvention defense
- IARP review process to analyze trending websites for vulnerabilities
- Protection from Advanced Persistent Threats (APTs)

Granular Policy Enforcement

- Time based ACLs allow for ultimate granularity in policy application
- Configurable profile/ACL based authentication re-validation ensures accurate user identification
- Customizable Filters, Exceptions, Warnings, Alerts and Quotas
- Proactive exception handling

Cloud-Based Offsite Remote filtering

- Multiplatform Support - Windows and Mac devices
- Integrated policy and reporting across on premise and remote access

Reporting

- On-box Enterprise reporting (ERS)
- High-level to detail-level reports
- Real-time Monitoring (RTM)
- Dashboard on Web vitals

Appliances

Model Comparison	35G	75G	WSA7550	WSA7750	WSA7850
Filtered Traffic Throughput	35 Mbps	75 Mbps	150 Mbps	500 Mbps	1+ Gbps
Workstations Supported	1 - 250	250 - 1,000	1,000 - 4,000	4,000 - 8,000	8,000 - 20,000+
