

BEST TIPS FOR YOUR YARD IN FEBRUARY

There is no better time than now to start getting your landscape ready for spring growth. This is also the beginning of another excellent planting season for new additions to your yard. Taking care of your yard now with weeding, pruning, and fertilizing will ensure a healthy and full landscape for the rest of the year. Our nursery experts have shared a few tips and tasks for your landscape this month.

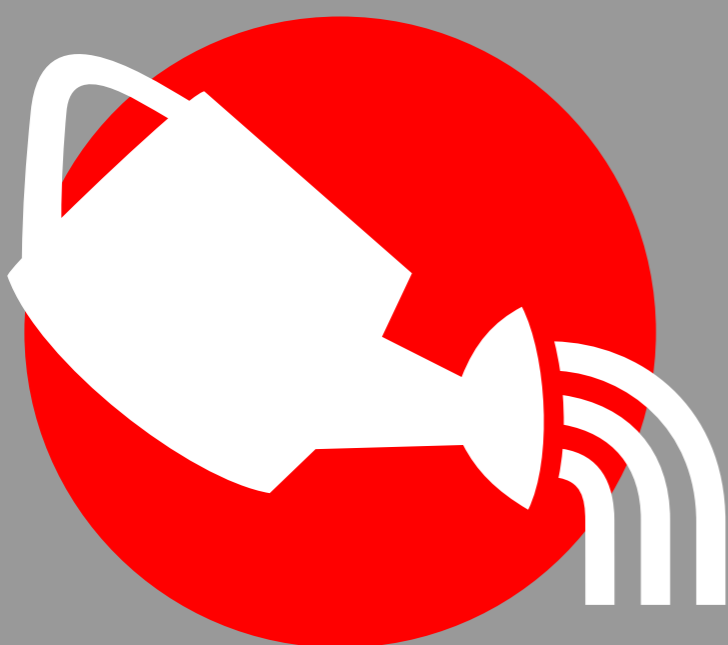

PLANT NEW TREES IN YOUR LANDSCAPE

Planting in early spring is ideal because it will give your trees and shrubs plenty of time to establish their root system and still give you lots of top growth by late spring and summer.

FEED YOUR LANDSCAPE

Add **Super Charged Moon Juice** to boost root development and plant growth. Start using Moon Juice monthly for the best results. Apply Soil and Water Conditioner to loosen tough soil and make nutrients more available, especially when planting something new to your yard. **Moon Royale** will help feed your lawn and promote thicker, greener grass!

CHECK AND ADJUST YOUR WATERING NEEDS

Pay attention to the weather for warmer and longer days. The weather may not change too much this month, but the temperatures will be steadily rising through February. When the sun starts to stay out longer, your watering schedule should be adjusted.

KEEP WEEDING YOUR YARD

Always get the weeds out of your yard before they can drop more seeds. Apply pre-emergent herbicides to your landscape to control the weeds. We offer multiple pre-emergent products at our nursery in granular and liquid form.
