CareVue EHR

Product Overview

American hospitals are at the center of an ongoing transformation. Industry consolidation, expanding networks, shifting payer reimbursements, emphasis on outcomes and more stringent reporting all require support from an advanced electronic health record (EHR).

CareVue from Medsphere is a fully-integrated EHR that supports clinical workflows across a variety of inpatient settings and business models. Building on a proven platform, for more than ten years Medsphere has enhanced CareVue for community hospitals by adding applications, tools and interfaces that make the system powerful, flexible and easy to use.

Defined Benefits

Medsphere combines complete EHR functionality with a seasoned services organization to create numerous advantages:

- **Affordable:** The CareVue subscription service makes a complete EHR available to all hospitals and health systems.

- **Rapidly Deployable:** Typically, 9-12 months for initial implementation; less when replicated across sites.

- **Physician Friendly:** CareVue is designed for clinicians by including them in the design.

- **Interoperable:** CareVue has dozens of prebuilt interfaces to third-party applications and devices. Sharing information provides a more complete picture of patient health.

- **Customizable:** Standardize best practices across your organization, configure your own database, and maintain your own system.

Key Features

- Full clinical management capabilities, including ancillary support

- Closed-loop meds management including medication reconcilitation

- Clinical and Provider Dashboards for census, patient, and order tracking

- Robust templates, group notes and multidisciplinary treatment plans

- Clinical Flowsheets for documentation and trending

- Complete patient billing and accounting

- User-friendly patient portal

- Mobile CareVue access

- Cloud or onsite deployment

- Ad Hoc and Dashboard Reporting

Medsphere

Enhanced Patient Care

Designed by clinicians from all healthcare disciplines, CareVue coordinates care across the continuum, which is especially valuable for patients with multiple chronic conditions. From ensuring the accuracy of patient identification to supporting safe medication use to standardizing best practices across teams and facilities, CareVue helps you provide better patient care.

Improved Business Practices

The cost of supplying information to government agencies and payers keeps going up. CareVue reduces data collection expenses by providing ready access to clinical information, comprehensive assessments, treatment plans, incident reports and administrative documentation.

A Better Bottom Line

Medsphere offers a better way to buy and own an EHR. Much less expensive than other solutions, CareVue's pay-as-you-go subscription services model and predictable payments enables your hospital to afford a comprehensive EHR within the current budget. No upfront costs. No back-end payments.
For networked organizations, CareVue is an asset, not an expense. Rapid, repeatable implementations, standardized best practices across facilities using documented methodologies and simplified reporting combine to give CareVue appealing ROI power.

Everything You Need to Succeed

Unlike EHR vendors that encourage dependency, Medsphere puts you in control. We are dedicated to helping you build and maintain your own system for one hospital or hundreds of locations. Our services expertise includes system-build, installation, training, technical support, clinical workflows and cloud services / hosting.
Medsphere takes care of all updates and upgrades to ensure you stay compliant with the everchanging regulatory environment. CareVue is fully certified for 2015 Edition Meaningful Use requirements established by the Office of the National Coordinator. We also give our clients the flexibility of onsite or cloud-based system implementation options.

The Medsphere Family of Health IT Solutions

Medsphere's health technology products and services support thousands of users over more than 400 implementations. Our Stockell Healthcare Systems division meets the revenue cycle and patient accounting needs of all care provider organizations. The ChartLogic division offers a full ambulatory EHR suite, including practice management, e-Rx and patient portal, and complete medical billing services. Using a vendor-independent approach, Phoenix Health Systems provides a host of healthcare IT services, including implementation, project management, service desk, end-user device management, infrastructure support, and IT leadership.
