

Sage EM (EM) Manufacturing

Southern Silicone's Cloud Solution Generates Rapid Time to Value

Industry

Industrial Chemical Manufacturing

Client Name

Southern Silicone

Locations

Lawrenceville, GA

System

Sage Enterprise Management

Challenge

The founders of Southern Silicone needed to find a business management solution that would allow them to track their extensive inventory and cross-market operations without the full implementation of an on-premise ERP system.

Solution

Sage EM (now Sage EM) was an ideal fit as it could track the company's inventory, quality control and finances straight from the cloud without the need for an on-site IT team or costly implementation.

Results

Sage EM in the cloud allowed Southern Silicone to invest their time and resources in building their business without needing to worry about servers, data security, or backups.

Southern Silicones supplies industrial, food, and cosmetic grade silicones from its southeastern U.S. manufacturing plant to customers all around the world. The company's largest market is the automotive care industry, where it supplies washes, protectorants, and tire shine products. While Southern Silicones is young, its principals are industry veterans with more than 50 years of silicone industry experience and innovation.

Fast Track Deployment

After founding Southern Silicone, Grant Morehead, CEO and CFO, says he and his partners wanted to invest their available capital and limited time in the operation, not on a lengthy implementation of a complicated enterprise resource planning (ERP) solution. "We didn't have an IT department, and didn't want to spend our resources assembling one," he recalled. After having deployed Sage EM, now Sage Enterprise Management or Sage 'EM', at his previous company, Morehead immediately considered the program in his search for a new ERP system. "We decided to go out on our own", Morehead explained, "so when we began shopping for a business management solution, our positive experience with Sage EM landed it on our short list."

"We knew Sage EM was the right solution to handle our chemical manufacturing, and when we learned it can be deployed in the cloud, we were sold. It meant we could be live fast and with a minimal up-front technology investment." Implementing a cloud-based business management solution like Sage EM saved Southern Silicone the steep startup investment typically associated with the implementation of a traditional, on-premise ERP system.

“Within just a few months we were up and running and able to make and ship products, buy supplies, and invoice our clients. We were very pleasantly surprised with the speed of the implementation. RKL eSolutions worked hard for us, and we all worked well together.”

Broad Functional Scope

The industry-specific functionality Sage EM delivers ideally supports the company's chemical manufacturing operations. "We need full lot tracking capabilities, quality control monitoring, and bill of material support," said Morehead. "Sage EM provides all of this and more." The company next plans to implement the customer relationship management (CRM) component of the software, integrating the front and back office operations to support a continued high level of service and support.

Robust Functionality in the Cloud

Having used Sage EM as an on-premise solution, Morehead was concerned that the company might not have access to the rich functional scope and customization capabilities that Sage EM is known for. "I didn't need to worry," he added. "Whether deployed on-premise or in the cloud, the functionality is identical. We can even customize it, something that's not always an option with a hosted solution."

Access from any Device

Morehead said that one aspect of Sage EM that he especially appreciated is the ability to access the application from any device. "I use Sage EM from my desktop, laptop, tablet, and smart phone. As long as I can get to a browser, I'm in business. As a busy business owner, this flexibility is very important to me."

A Solution for the Long Term

"Thanks to the cost-effective nature of a cloud-deployment model, we were able to secure a solution that can support our operations for the foreseeable future, instead of the typical path of a start-up company—starting with an entry-

level application and migrating several times," says Morehead. "Using Sage EM, we can grow by a factor of 100 without stressing the software."

Recommended Unconditionally

Morehead would absolutely recommend Sage EM; "It is easy to use, has tremendous power, is accessible from anywhere, and can support companies like ours that have global aspirations."

He concludes, "With Sage EM in the cloud, we are able to invest our time and resources into building this business. We don't have to worry about servers, data security, and backups—that's all handled by the experts."
