

# WHY CUSTOM CODE NEEDS IMPORTANT CONSIDERATION IN YOUR SAP S/4HANA MIGRATION JOURNEY

SAP S/4HANA simplifies the data model for your ERP solution and is where all your added business and IT benefits begin.

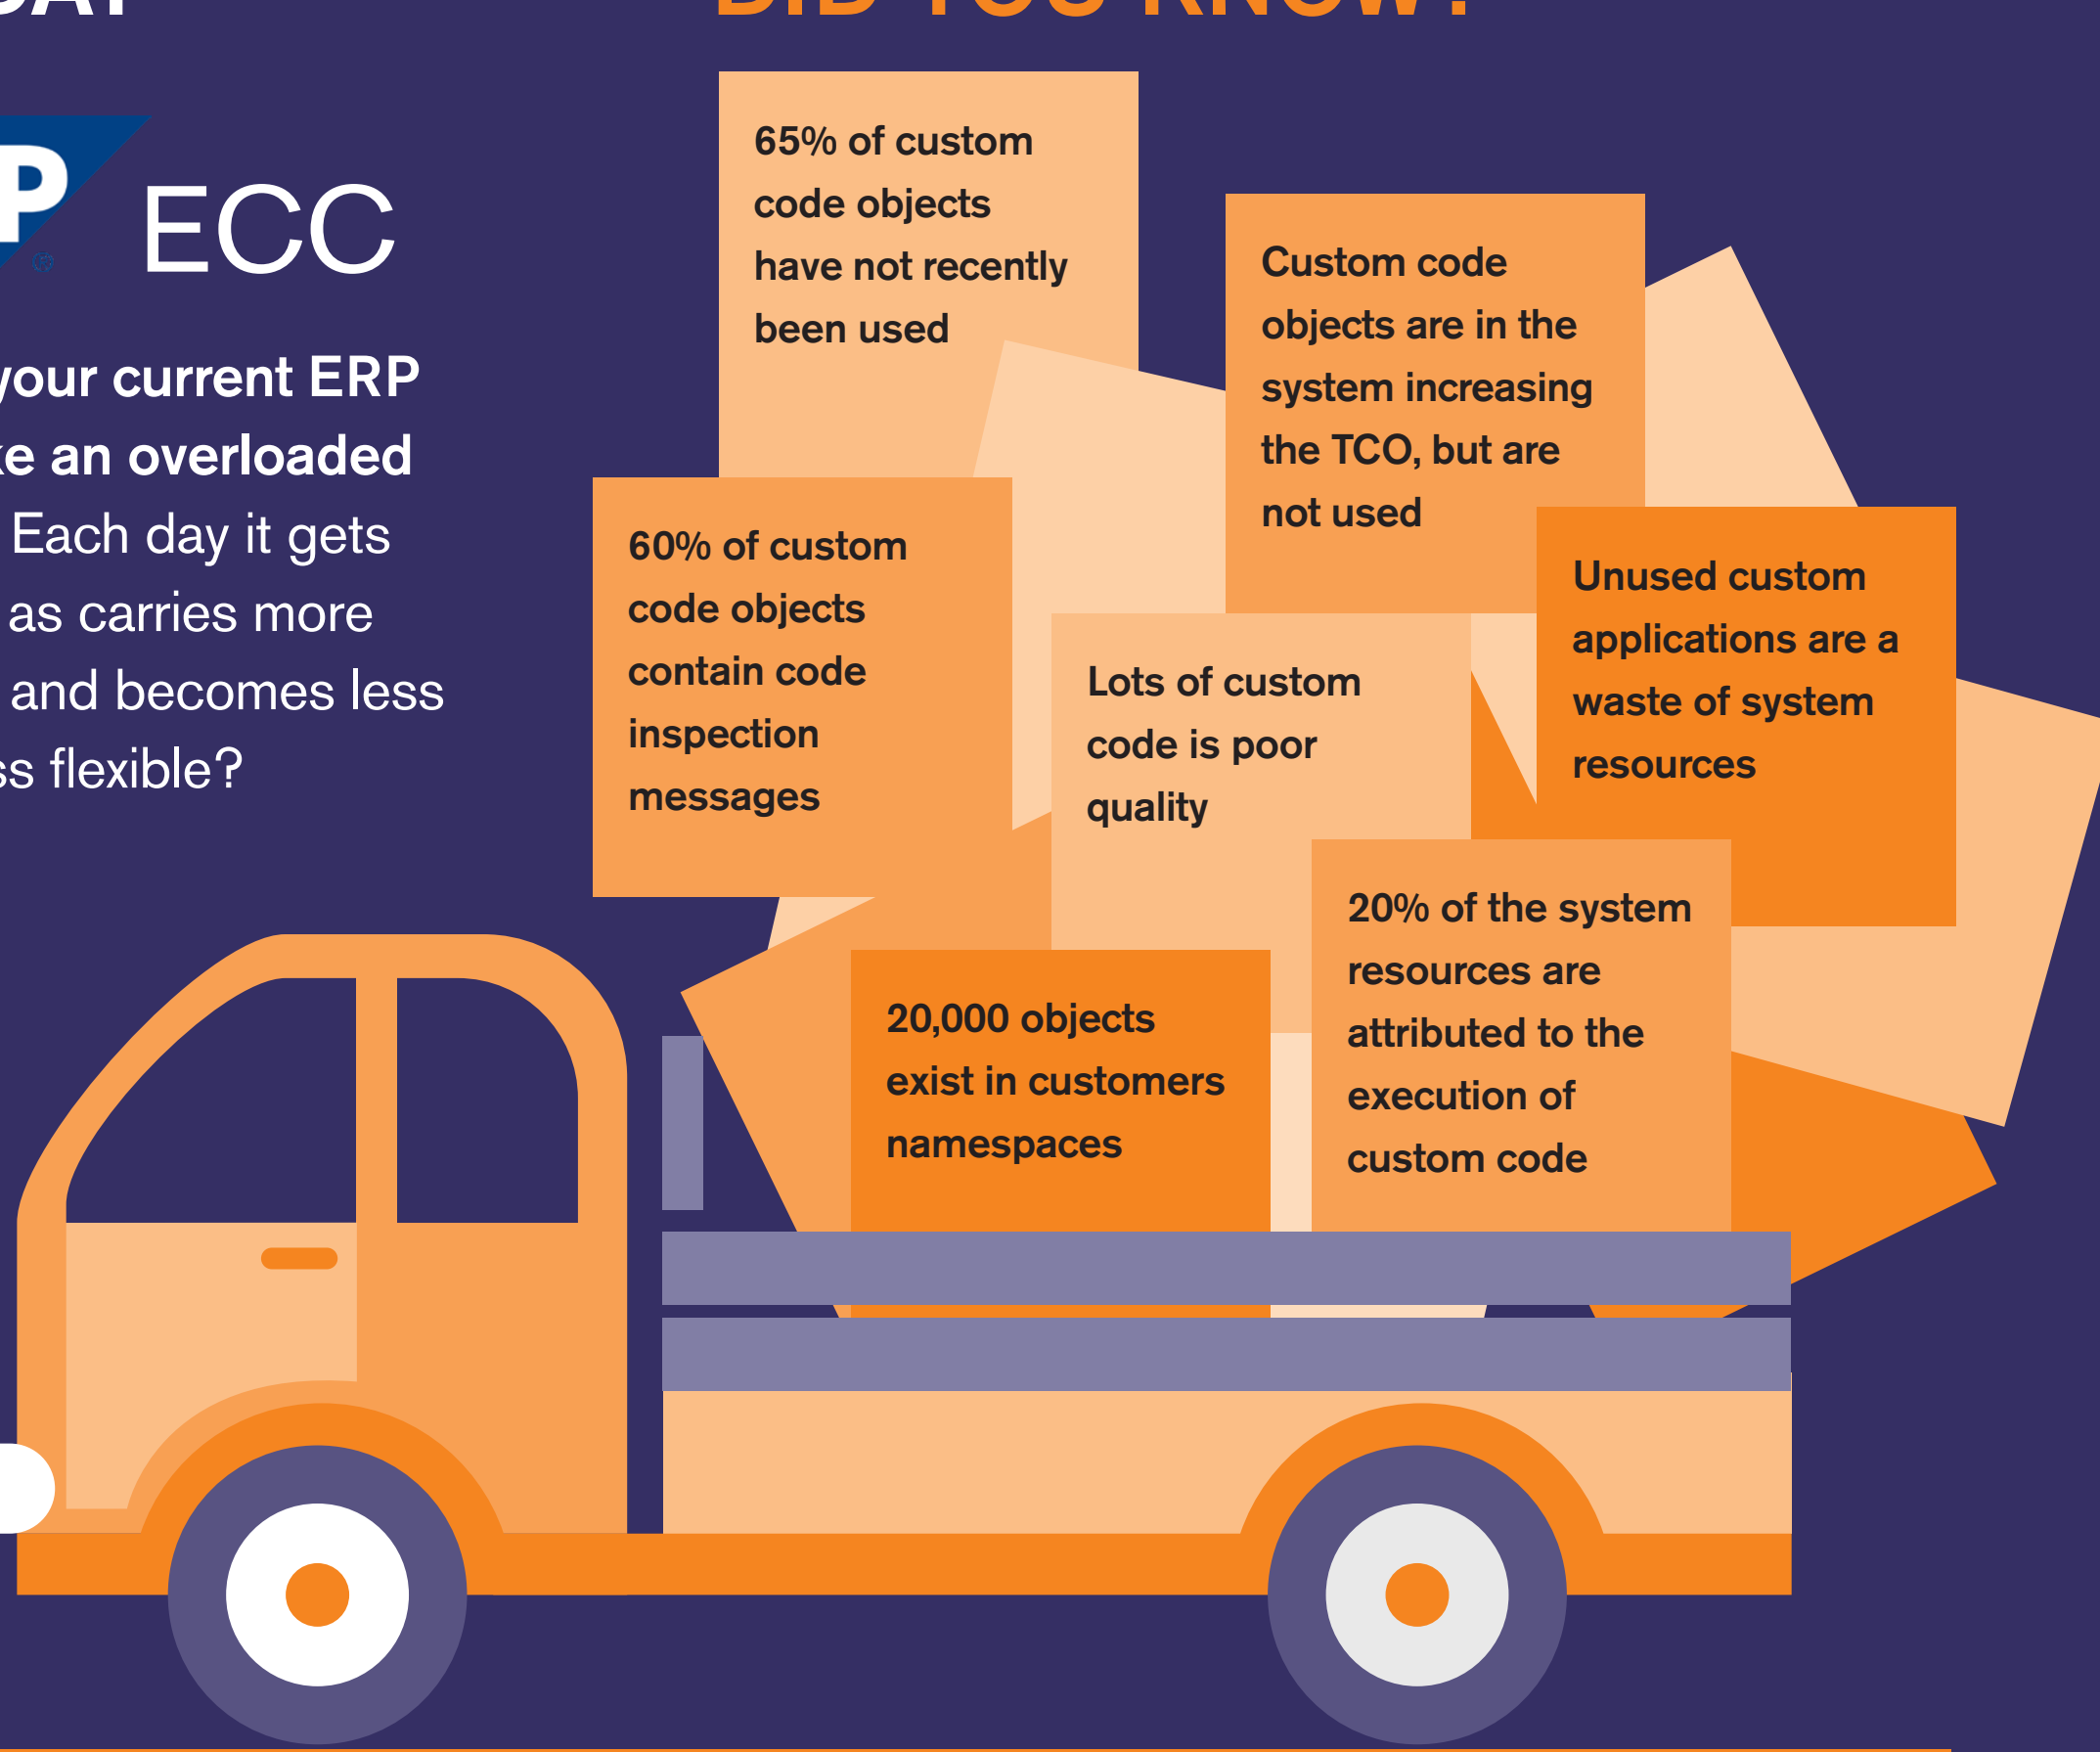

But it is a new data model and to migrate your existing ERP solution to SAP S/4HANA, some of your custom code may need to be adapted. Your existing custom code may refer to objects that no longer exist or may not take advantage of new SAP S/4HANA features or data types.

## TODAY

Does your current ERP feel like an overloaded truck? Each day it gets slower as carries more weight and becomes less and less flexible?

## DID YOU KNOW?

CORE

CUSTOM OBJECTS IN THE CORE

## WITH SAP S/4HANA YOUR TRUCK COULD LOOK LIKE THIS:

### TOMORROW

CLEAN CORE

EXTENDED WITH APPS ON SAP CLOUD PLATFORM

Our recommendation is to develop your custom code on the SAP Cloud Platform. This platform is designed to create extensions, new innovations (and also integration scenarios). This way you keep your SAP S/4HANA core standard and clean. As a result, it will be more manageable and easier to upgrade.

Developing applications on SAP Cloud Platform gives you clear benefits:

**50 – 75% reduction** in development time

**20 – 25% decrease** in Total Cost of Ownership

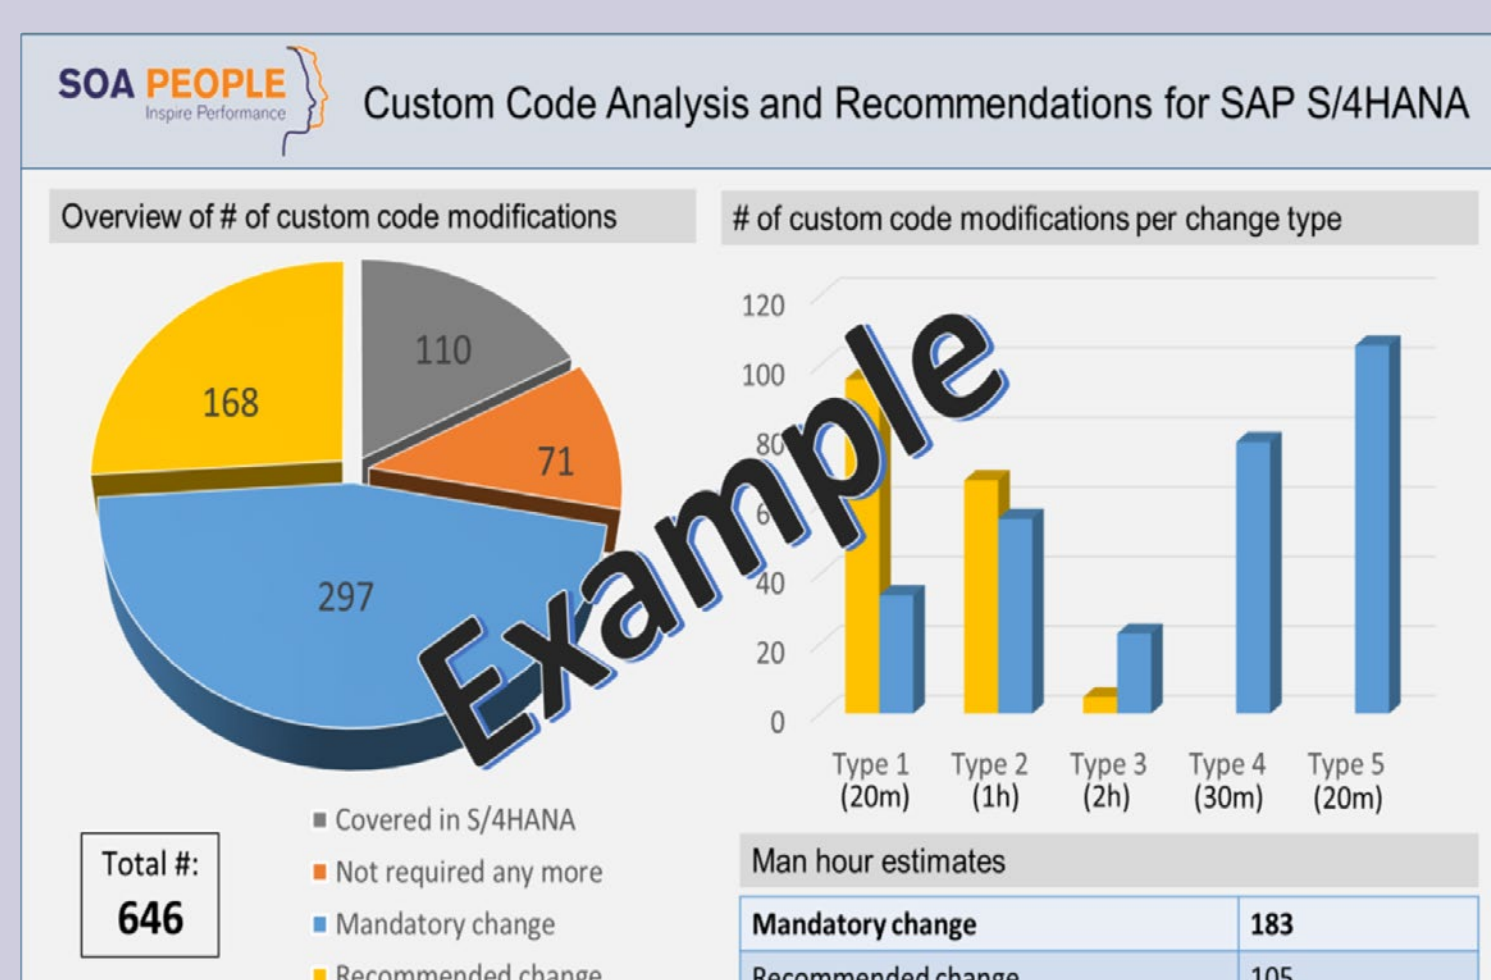

**40 – 50% decrease** in application development costs

## TAKE YOUR FIRST STEPS TO PREPARE YOUR CUSTOM CODE FOR SAP S/4HANA:

1. Analyse your custom code and answer questions such as:
  - What custom code can be replaced by the standard functionality of SAP S/4HANA
  - Which custom code is no longer required by your business?
  - Which custom code must be adjusted for SAP S/4HANA
  - Which custom code can be optionally improved for SAP S/4HANA
2. Get rid of your old unused custom code to lower your TCO and make your move to SAP S/4HANA smoother
3. Adapt your custom ABAP code to your new SAP S/4HANA software and optimise your performance with some fine tuning

It's an illusion to completely avoid custom code BUT it's essential to have proper governance of it. Start today with our thorough **Custom Code Analysis and Recommendations Service**. It's part of our SAP S/4HANA Assessment approach, proven by many of our existing customers.

The output of this service is not only an analysis of your custom code and recommendations about how to fix it, but also a clear effort estimate which you can use in your budget preparation for your SAP S/4HANA journey.
