

Occupational Health Tracker

Get full insight in OHS issues, create a safer work environment & increase staff satisfaction!

Occupational injuries can have devastating effects on staff, create burdensome costs and reduce service levels. The Occupational Health Tracker helps you to take control of the paperwork and the problem. From now on you report incidents and process claims using online forms, send data instantly to your workers compensation insurance plan and speed up payments. All those involved with managing claims have the most important files when they need them. Claims are prioritized according to risk category and automatic alerts involve the right people at the right time. Management dashboards give an up-to-date view of all your occupational health incidents and their status.

Accident investigations

The Occupational Health Tracker guides you through a thorough investigation of incidents, giving you a better understanding of all the issues. You have powerful tools to understand contributing factors of injuries and you are able to zero in on root causes.

Learning & prevention

By learning from analysis, preventive measures are targeted and effective. In-depth analysis and monitoring allows you to hold the gains and continually improve. You can also benchmark your performance against those in your peer groups. The Occupational Health Tracker helps you to keep track of all your organization's efforts towards improvement and monitors performance regularly to put the emphasis on learning and prevention.

Assess workplace hazards

The Occupational Health Tracker gives you an opportunity to look objectively at your workplace and identify those conditions that may contribute to your problems. What risks are present, what hazards exist and where the exposures lie.

Manage absents

The Occupational Health Tracker can help you manage short-term and extended absents. With the attendance support application you have a systematic staging of the dialogue between managers and staff that are away for extended periods of time. With built-in templates, you can easily manage the process and eliminate paperwork involved with progressively managing staff absences.

As an ideal support for your Return to Work programs the Occupational Health Tracker streamlines your efforts and improves communication all around to improve workforce productivity and reduce costs.

Create online surveys

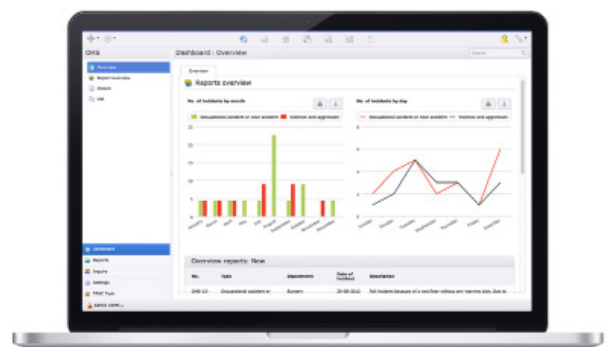

The Occupational Health Tracker contains a versatile on-line form builder, so that you can create staff surveys and conduct research on a variety of issues and concerns. To get you started, we include a soft issue risk assessment survey that helps to assess the status of the most common workplace injury in healthcare.

Always up to date

With TPSC Cloud™ you don't need to worry about expensive hardware installations and backups. You always have the most up-to-date software version and can feel confident that your data is securely and privately stored. We meet the rigorous standards of privacy and security for the healthcare industry.

An integrated approach

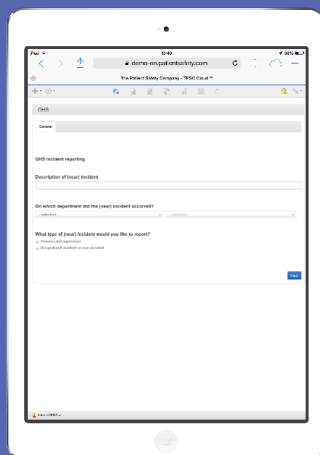

The Occupational Health Tracker is part of an online library of governance applications integrated into one enterprise solution. You also have a toolkit for building new applications for your local requirements, without the need for IT assistance.

Management dashboard

Discover the benefits

Reduction of administrative burdens	Online registration by using a desktop or mobile device. Website integration is possible, for example through a link with the OHS web form. Automatic centralized/decentralized workflow.
Better turnaround times	Through dynamic work lists the OHS officer will have a complete overview of all cases and their status.
Lower costs	The timely and correct handling of cases, will reduce the cost of claims.
Meet regulatory protocols	With the tuned workflow you will meet the legal protocols for the handling of OHS claims.
Improve communication	Automatic signals and email notification support your business process. Easily start a conversation from a specific file to gain extra information. The conversation is automatically saved within the file.
No information loss	All information and communication history available from one file.
Automatic relationship with other files	Related files are automatically displayed.
Monitoring of tasks and improvements	Integrate with TPSC Improvement Manager to initiate and track measurable improvements.
Better quality and staff satisfaction	Through central management dashboards and decentralized department dashboards management information is provided.
Secure	Only authorized employees have access to sensitive information.
Rapid deployment	Standard application and ready-for-use. But also flexible, adaptable and easy to adjust.
