VIRTUAL DESKTOP SOLUTION

SECURE DESKTOP MANAGEMENT, SIMPLIFIED

In an increasingly mobile world, businesses and providers are always searching for new ways to manage the bring-your-own-device (BYOD) movement that also address growing data security concerns. With DaaS, deployment and management of the desktop environment is simplified.

Data and applications are accessed through a virtual environment, allowing businesses and providers to support, patch and maintain a single environment rather than numerous individual desktops. With one central environment, your data is more secure and users are allowed the flexibility to choose between working on desktop or mobile devices, from anywhere.

BENEFITS FOR YOUR BUSINESS

MANAGEMENT

Faster onboarding and updates due to the ability to manage desktops on a 1:many basis instead of 1:1

SECURITY

Higher level of security due to the fact that applications and data live in the cloud as opposed to on devices

ACCESSIBILITY

Access at any time, from anywhere with the most up-to-date data because it is automatically synced

HARDWARE

More time between replacing desktop hardware due to extended life of your machines

WORKFORCE

Ability to implement Bring Your Own Device (BYOD) initiatives and allow staff to work remotely

COST

Less management, hardware and security costs which directly effects your bottom-line

CUSTOM SOLUTIONS

Our DaaS solution provides the virtual infrastructure and desktop experience to complement your IaaS solution. Built using a Windows 2008 or 2012 server, the virtual desktop image, dynamic or static, provides a Windows 7 or Windows 8 desktop experience. We enable user access from their endpoint device while you decide what clients will use to access their remote virtual desktops, from personal computers to tablets to smart phones. Bottom line: you have options to build your solution to fit your business and your client's requirements.

PARTNER PREREQUISITES

RESOURCE	REQUIRED PRIOR TO DEPLOYMENT	OPTIONAL SERVICES
ENGINEERING	Dedicated and available engineers	Professional services available
SUPPORT	Sales, desktop and application-level support Active directory support	
IaaS SERVICE	Partner must have active Green Cloud IaaS service	

SERVICE DELIVERY & OPTIONS

RESOURCE	REQUIRED PRIOR TO DEPLOYMENT	OPTIONAL SERVICES
VIRTUAL DESKTOPS	**Dynamic Desktops:** 1vCPU, 2GB vRAM, 50GB OS image 1vCPU, 4GB vRAM, 50GB OS image 2vCPU, 8GB vRAM, 50GB OS image **Static Desktops:** 1 vCPU, 4GB vRAM, 75GB OS image 2 vCPU, 8GB vRAM, 75GB OS image 2 vCPU, 16GB vRAM, 75GB OS image 4 vCPU, 16GB vRAM, 75GB OS image	Additional storage can be added in 25GB increments
CUSTOMER SERVICE	Partner technical support included	
DESKTOP TEMPLATES	Initial template (gold pattern) creation and customization for up to two patterns	
DEPLOYMENT TRAINING	Included	Green Cloud professional services available
NETWORKING & SECURITY	We will provide basic networking configuration as part of the initial product setup* * An additional Network and Security bundle is required for each new tenant	Green Cloud professional services available
