

Is a Facility Audit Right for You?

Should I get an audit?

Hippo offers turnkey solutions. We catalog assets onsite, build the database offsite, and either create or beef up your PM schedule.

Do you want a turnkey solution?

NO

You can't schedule PMs for assets you don't know about, and missed assets lead to recurring problems.

Do you have a complete, accurate list of assets?

NO

Audits are a good idea even with a small number of assets. Some assets have a lot of data points. Fifty is a guideline, not a strict rule.

Do you have more than 50 assets?

YES

NO

Building a database isn't free. It's hourly wage of the technician X estimated number of hours X added stress of having one less technician closing out work orders.

Can you afford to get everything into the database yourself?

NO

YES

Compiling an accurate list can be tricky when you've got multiple facilities. For consistent data, it's best to have the same auditors throughout the process.

Are your assets all in one location, and will the same team collect all the data?

NO

YES

A good schedule has 80% of maintenance work decided at least a week in advance.

Do you already have a good PM schedule set up?

NO

Try Standard or Enhanced Onboarding
