Cygilant
Security-as-a-Service

Bringing enterprise-class security to you, no matter your size or budget.

Rooted in 20 years of experience and with hundreds of customers, Cygilant Security-as-a-Service offers access to some of the best cybersecurity experts in the market with the technology, knowledge and proven procedures to tackle security threats proactively in a simple and affordable way.

Simple, integrated service: From SIEM to VM to PM, Cygilant has your back.

CYGILANT®

Cyber threats are real. We believe everyone should be secure regardless of size or budget. Cygilant Security-as-a-Service liberates you from the stress, cost and complexity of achieving enterprise-class security.

Don't break the bank on hiring or cybersecurity products. Get results now. Cygilant Security-as-a-Service is your cybersecurity team.

Why Cygilant is your Cybersecurity Team

Founded in 2001, Cygilant is led by a seasoned team of cybersecurity executives, technologists and some of the world's leading investors. We make 'enterprise-class' security accessible to everyone. Customers select us because we simplify a complex problem, cost-effectively.

Whether augmenting a security program or starting from scratch, Cygilant hunts, detects and quickly responds to threats by leveraging its dedicated Cybersecurity Advisors, 24×7 Security Operations (SOC) team and our SOCVue® Platform.

Cybersecurity Advisors

Our experts are your experts. We work one-on-one with you as an extension of your team to identify and meet you security goals.

24×7 SOC Team

We operate global SOCs with four tiers of humans from level 1s to 4s working around the clock.

SOCVue Platform

Simplify and consolidate multiple streams of security data from vulnerability management and patch management to detect and respond to threats faster.

The Company We Keep
Because, no one should tackle cybersecurity alone.

Cygilant integrates with best-of-breed solutions to leverage the investments you've already made. It's your stack, we're here to help.

RAPID7   **QUALYS®**   **ivanti**

AT&T Cybersecurity   **ALIEN VAULT**

A simple approach to complex cyber-security problems, and a team that has your back.

Cygilant SOCVue provides three core products. Select all or one to gain access to our Cygilant Cybersecurity Advisors and 24x7 SOC team for monitoring, management and compliance. Your CSA will conduct monthly reviews with your team on your security posture and overall system health.

SIMPLIFY with SOCVue Security Monitoring

Cygilant security monitoring manages the complexity of SIEM and Log Management products. We collect security events across your IT infrastructure, network, and applications. The Cygilant SOC triages and investigates potential security incidents to give you rapid actionable recommendations. For your SIEM, you can choose either our SecureVue® Cloud platform or leverage AlienVault.

- Continuous monitoring of log and event data to detect potential security incidents
- Integrated network intrusion detection (IDS), file integrity monitoring (FIM), and threat intelligence feeds

DETECT with SOCVue Vulnerability Management

We perform regular discovery scans using Qualys VM, Nessus, or Rapid7 to identify IT assets on your network. Regular scans detect vulnerabilities in the OS, applications, and services running on your assets. We prioritize, assign, investigate and remediate vulnerabilities.

- Vulnerability reports that provide guidance for reducing your attack surface
- Executive reports to provide summary data for all stakeholders
- Targeted scans for new or modified systems upon request

DISCOVER with SOCVue Patch Management

We set up scanning to discover missing software patches that leave your IT assets exposed. Our SOCVue platform helps schedule, approve and deploy patches. Patching is performed using Cygilant patch agents and optional local patch server, in partnership with Ivanti.

- Automated patch installation, scanning and rollbacks
- Configurable role-based access control to separate change control duties
- Large OS and third party application patch repository to cover popular business applications
- Weekly patching audit trail reports and monthly executive reports to demonstrate compliance and show organization progress

Join 200+ businesses that trust Cygilant

"I've seen firsthand the variables that mid-sized organizations have to deal with when it comes to securing their organizations. Cygilant's Cybersecurity Advisors help organizations improve safety, trust and privacy."

Will Semple
Cybersecurity Director, eBay

"Cygilant allows us to meet PCI and HIPAA requirements, access an ideal mix of cybersecurity features and services in a flexible OpEx model, and tap into senior cybersecurity experts that we would not be able to retain in-house."

Howie Cheney
COO, Fonative

"Cygilant Security-as-a-Service helps us to bridge our resources gap and gain much better visibility into what's happening on our networks."

Tyler Campbell, IT Security at Connecticut College

Get the Proof You Need to Know You Are Safe

We are proud of our Security-as-a-Service and know you'll be impressed. Let us prove it to you. You can enroll in a Cygilant proof of concept that demonstrates how quickly we help you get safe in an unsafe world.
