

Manage members from anywhere with TruCare Mobile

Care managers who work in the field need easy-to-use technology to identify opportunities to improve care. TruCare Mobile can help. It's a care management app for the iPad® that works both online and offline.

Offline capabilities make it easy for care managers to manage care and have meaningful interactions with members, even when internet access isn't available. When your care managers make changes to the member record offline, they are reflected once the user is back online.

Care managers can:

- View member summaries
- Update demographic information
- Access assessment summaries
- Add/view/void assessments
- Add clinical information
 - Add medications
 - Add diagnoses
 - Add allergies
 - Add notes
- Capture digital signatures
- Submit assessments
- View provider authorization requests
- Check authorization dates of service
- Check authorization status
- Review key metrics

Benefit Breakdown

- Improve efficiency by using the same device in the office and on the road
- Minimize HIPAA compliance risk by eliminating handwritten notes
- Promote collaboration among care managers and caregivers
