

UXPLORE

Automation Platform for creating and managing your Digital Workforce of Bots

Hello, I'm TATT (Testing ALL The Time), and I specialize in testing around the clock much faster, cheaper, and accurately than my human counterparts.

Since joining the team, I have helped achieve:

I'd love to show you how I'm disrupting Test Automation!

Ask for my DEMO

I like being different.
Let me tell you how...

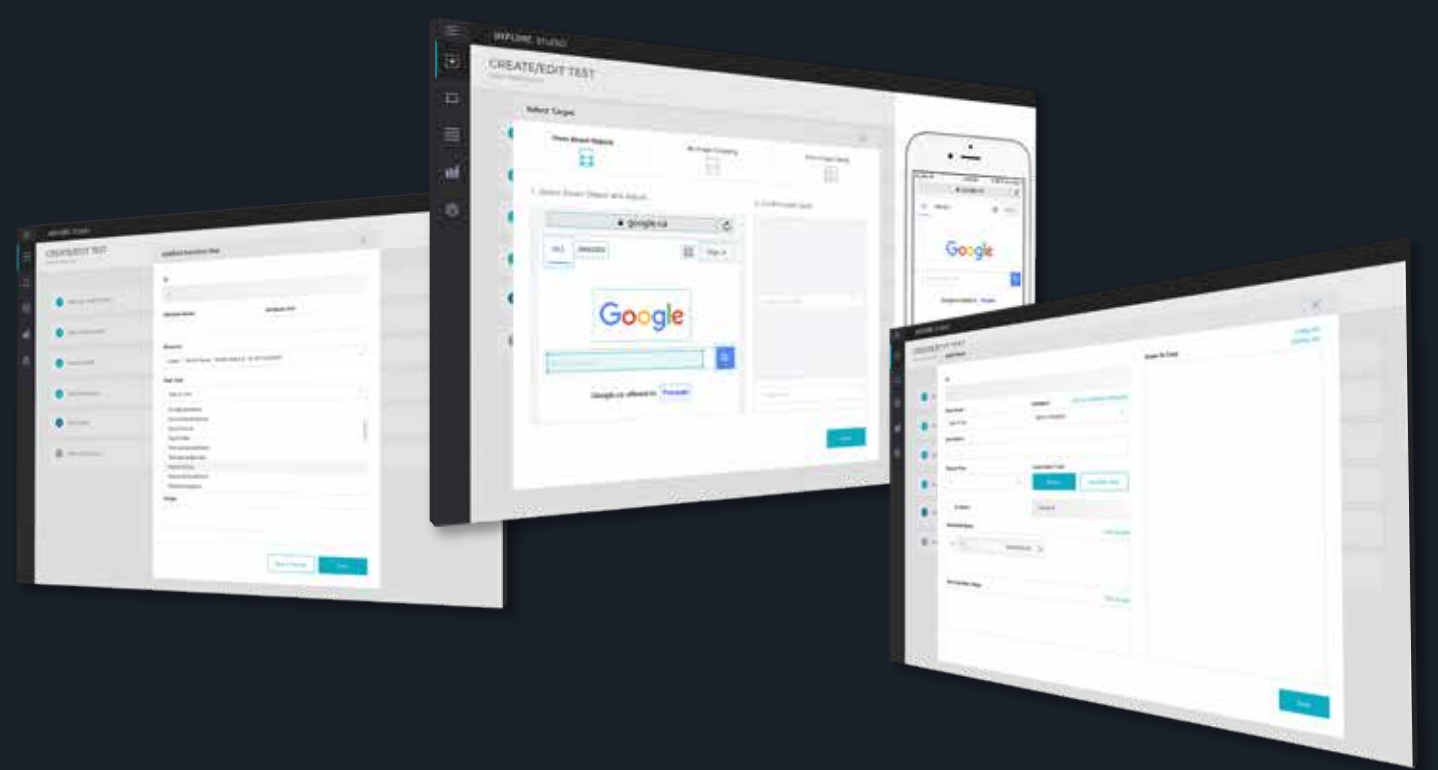

End-to-End Testing

Unlike others, I test digital systems across Web, Mobile, Cloud, IoT, Legacy CLI or even other proprietary CRM, Billing, and Procurement Systems.

Simple & Intuitive

I can be created on the fly, without any coding or deep technical knowledge whatsoever. And not to brag but I'm a quick learner - as in the first-time - meaning I can then run tests automatically.

Non-Intrusive

I perform data transfers and validations across disparate systems, all without you having to develop or integrate at the API level or stub our core parts of the enterprise systems

Reporting & Analytics

I give you access to a real-time dashboard, full of meaningful and data-driven insights, designed to prompt and aid decision making; from anywhere at any time.

A few of my
success stories...

9x
Increase of
Team Capacity

DevOps Continuous Regression Challenge

There were multiple digital channels - with weekly releases to production - frequently breaking core user flows.

Success

I automated validation of 2000+ flows continuously, executed on 6+ platforms in English and French, and reported triaged bugs directly to clients management system. Thanks to me, my team was able to proactively address issues and avoid negative end user experience.

Customer Experience Optimization

Challenge

Unpredictable page load times were weakening Net Promoter Score and increasing Call Centre volume.

5x
Increase in
Transaction
Completion

Success

I helped my team identify the exact customer struggles in the production environment due to long latency and make data-driven decisions to improve the overall customer experience on the e-commerce channel.

Revenue Management System

Challenge

A complex system handling millions of transactions in production with a legacy interface needed an update. The client was convinced that automation was impossible.

Success

I helped show the client that automation was possible by automating UAT, resulting in record time frame for system upgrade with significant cost savings. Needless to say, I won employee of the month.

About UXPLORE

With the right automation technology, people and organizations today can focus on solving the hard problems that matter and change the world for the better. When we looked at what was available regarding automation technology, we saw products that were too rigid and old-fashioned to handle today's digital world, and custom systems took too long to deploy and were very costly to maintain and improve.

We saw automation solutions and approaches that failed when it came to cross-platform support and all-or-nothing business models that forced enterprises to make unacceptable trade-offs between adopting automation and the cost of doing so. We saw a need for a different kind of approach, and we knew it would take a different kind of company to build it. That's why we created UXPLORE.

We are working hard to build a future in which rule-based, repetitive tasks will never require humans. We want to enable people and organizations to fulfill the mandates with which they've been entrusted - to deliver value to their customers by focusing on doing the things that matter.
