

## MEET THE FIRST MEMBER OF THE SYR-LINE RANGE:

The 17.5mm Analog Timers, a new family of 6 timers with all the classic functions + 2 special ones, higher power with 16A or double output of 8A.

**SYR-LINE**

### WHY HIGH POWER?

#### » Control more or bigger loads

Forget about having a combination of Timer+Contactor to control larger loads or big number of loads, due to its capacity Syr-line can be your all-in-one solution.

#### » Extra protection when you need it

Even when your application doesn't use large amounts of current constantly, the possibility of having surge or inrush current is always present. Syr-line products have a bigger capacity to withstand these effects than standard timers due to its higher current capacity.

### WHY DOUBLE OUTPUT?

#### » Save space in your panel

Having two relays in a 17.5mm package will help you to add more devices to your panel thanks to the space reduction.

#### » Select the 2 output timers working together and control different loads at the same time

Have the control of different loads with the same device helping you reduce costs. Or separate your loads between the two outputs so if something happens to one set of loads the other one is not affected.

#### » Select 1 output relay timed and the other one instantaneous for versatility like switching-on gradually different loads.

While one output turns-on instantaneously, the second one turns-on at a delayed time helping you to gradually switch-on both loads. Having two relays in one same unit gives you the versatility you need for your application.
