

PRODUCT DATA SHEET: iConnect Credit Cards for SAP Business One

The iConnect Credit Cards module for SAP Business One provides efficient and convenient processing of credit card transactions directly within the Business One system. iConnect Credit Cards adds secure credit card payment processing to the SAP Business One order entry process for all organizations looking to offer their customers the convenience of paying for their products via credit cards.

Product Overview:

Today, with interest rates at historic lows, businesses and consumers alike are increasingly using credit cards as a method of conveniently and efficiently conducting their purchasing activities. Doing so allows for faster turn around of order processing and accelerating the delivery of goods to their door. However, ensuring the secure and accurate handling of credit card transactions has often swayed businesses, especially smaller or newer businesses, from accepting credit cards.

The iConnect Credit Cards payment module allows for real-time credit card pre-authorization and transaction processing directly from within the Business One order entry, delivery, and invoicing screens. Because it is integrated in the Business One environment, customer master data records are created and utilized, thus eliminating redundant data entry. A customer's credit card information can be added to a customer record "on-the-fly" or retrieved from an existing record.

Key Benefits:

- ⇒ **Accepts all major credit cards:** Visa, MasterCard, American Express, Discover, etc.
- ⇒ **Integrates to Most Merchant Systems:** We include support for Authorize.net, and Paypal/Payflow/Verisign, or it can be customized to connect to virtually any credit card processor or internet gateway to authorize and process payment in real-time with SAP Business One (call us for other gateway options)
- ⇒ **Supports Major Banking Functions:** Supports credit card deposits, refunds, and account settlements.
