

PRODUCT DATA SHEET:

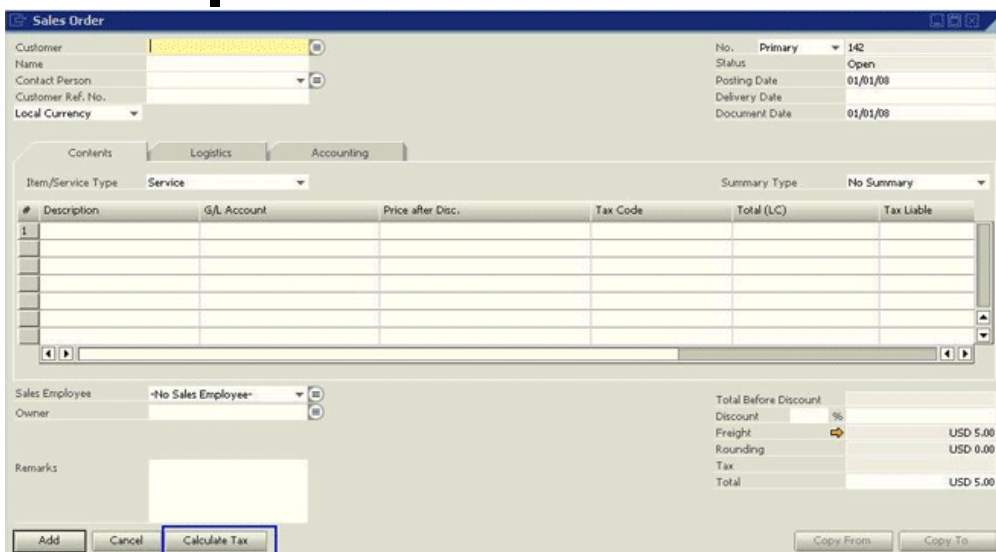

Sales Tax Integration for SAP Business One

Powered by Navigator iConnect & Avalara

SAP Business One is an integral part of SAP's small-midsize ERP suite. While fully integrated ERP enables business to flow faster than ever before, in some cases, business lack the additional tools to support the rapid flow of business. One such lack is the ability for companies to quickly, and accurately calculate correct sales tax rates for different regions. In addition, even when rates are calculated, companies run the risk of human error when inserting sales tax into sales orders and delivery document. Avatax's sales tax calculation software looks to address both issues. And, now Avatax is fully integrated with SAP Business One via Navigator's iConnect integration tool.

KEY FEATURES

- Avatax's industry-leading tax calculating software is now fully integrated within SAP Business One
- Streamline the sales order process by automatically calculating local and state taxes
- Integration enables calculated tax figures to be automatically ported into sales quotes and orders, as well as delivery documents
- Virtually eliminate double-entry, and reduce the risk of human error
