

PRODUCT DATA SHEET:

Credit Card Integration for SAP Business ByDesign

Powered by Navigator iConnect

The iConnect Credit Cards module for SAP Business ByDesign provides efficient and convenient processing of credit card transactions directly with the SAP ByDesign system. iConnect Credit Cards adds secure credit card payment processing to the SAP Business ByDesign order entry process for all organizations looking to offer their customers the convenience of paying for their products via credit cards.

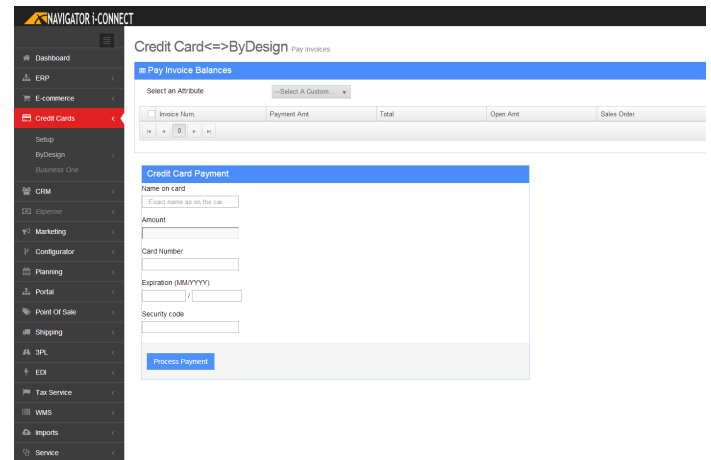

KEY FEATURES

Today, with interest rates at historic lows, businesses and consumers alike are increasingly using credit cards as a method of conveniently and efficiently conducting their purchasing activities. Doing so allows faster turn around of order processing and accelerates the delivery of goods to their door. However, ensuring the secure and accurate handling of credit card transactions has often swayed businesses, especially smaller or newer businesses, from accepting credit cards.

The iConnect Credit Cards payment module allows for real-time credit card pre-authorization and transaction processing directly from within the SAP ByDesign order entry, delivery, and invoicing screens. Because it is integrated in the SAP ByDesign environment, customer master data records are created and utilized, thus eliminating redundant data entry. A customer's credit card information can be added to a customer record "on the fly," or retrieved from an existing record.

PRODUCT BENEFITS

- **Accepts all major credit cards:** Visa, MasterCard, AMEX, and Discover
- **Integrates to most merchant systems:** We include support for Authorize.net, and PayPal/PayFlow/Verisign, or it can be customized to connect to virtually any credit card processor or internet gateway and process payment in real-time with SAP Business ByDesign.
- **Supports major banking functions** like credit card deposits, refunds and account settlements.
