

Product Data Sheet: iConnect Shipping for SAP Business One

iConnect Shipping module for SAP Business One provides complete integration real-time & visibility of UPS, Fed-Ex, and USPS. Powered by iAbol & iConnect, the solution seamlessly integrates with the accounting and logistics modules. IConnect Shipping is ideal for all companies who want to apply shipping rates at the time of order entry so to give customers exact prices and shipping updates all from within SAP Business One.

PRODUCT OVERVIEW

When shipping customers were given the ability to track parcels over the internet, the bar for fulfillment visibility was officially raised. Parcel shipping companies such as UPS, FedEx, and USPS launched shipment tools such as UPS *WorldShip*, FedEx *ShipManager* to place and track shipments. Unfortunately, these functions are often disconnected from the internal business systems that companies use to manage the front end of the order process.

But now, *iConnect Shipping* has erased that void, making it the perfect solution for your growing business' shipping & fulfillment needs. It seamlessly integrates your package and shipping requirements with SAP Business One, creating a robust, integrated, end-to-end shipping solution.

WHAT IT WILL DO FOR YOU

- ⇒ iConnect Shipping, powered by iAbol.com features all the benefits of a software-as-a-service solution that can help your company manage shipping activities across multiple sites, users and carriers while reducing cost.
- ⇒ Better control shipping throughout the organization giving your company complete control over package shipping, from the corporate office to the retail stores to the warehouse. With users roles and responsibilities, you can implement your company shipping policies down to the specific policies down to specific carrier and service level.
- ⇒ Increase productivity among employees by offering power shipping tools right from within SAP Business One, giving them the productivity of online resources and shipping choices
- ⇒ Because the software is hosted in the cloud, as is SAP Business One, there is no software to install and maintain, and no IT resources are require. All you need to access is a computer, tablet or smartphone with a standard web browser.
