MISSION

To keep our customers from being caught unprepared at OSHA and EPA inspections, to protect our customers from ruinous fines and lawsuits, and to help our customers provide a healthy and safe workplace for their employees.

SERVICES

Safety Training Services, Inc. ("STS"), offers "hands-on" hazardous waste, emergency response, confined space entry, technical rescue, and other training required by OSHA, the EPA, the Department of Transportation and the Resource Conservation and Recovery Act (RCRA) under controlled but simulated, realistic conditions as a practical alternative to "traditional" seminars. We also offer a broad spectrum of other health and safety related services including standby rescue teams for confined space entry, needs assessment, program development, risk analysis, equipment sales and compliance evaluations.

STAFF

STS trainers are all retired or practicing firefighters, paramedics, HAZMAT specialists and active rescue team members with first-hand knowledge of the field.

HISTORY

In 1993, our company started out as the North Central Training Center for Environmental Resources Management Group [ERM] in Alsip, Illinois. ERM, at that time, had 109 locations worldwide but our Alsip, IL location was the only location providing the services that we offer. In December 2001, when ERM decided to close its training division, our employees joined together to found our own business in Hammond, Indiana doing what we do best - offering our customers the best value in training and contractual stand-by rescue services.

CUSTOMIZED TRAINING

STS can present training at its fully equipped facility in Hammond, Indiana or customized to your organizational and industry-specific needs right at your facility, i.e., on-site.

SCHEDULE OF CLASSES

Please call your representative who will gladly mail or e-mail a current schedule of classes. Or you may download a schedule directly from our website.

HEALTH & SAFETY PROGRAM DEVELOPMENT

STS can design customized training for your group and/or general safety programs covering a variety of topics. Such programs might be put together because of federal record-keeping requirements, special environments (e.g., mines, or special types of hazardous materials (e.g., explosives). Please call your Representative to discuss your needs.

CONFINED SPACE SERVICES

STS can provide a fully equipped, trained standby rescue team for your employees or contractors who work in confined spaces. Many companies consider this option when they are unwilling or not capable of maintaining and financing a full-time confined space rescue team.

FEES AND COSTS

Call your Representative for this information. We will be glad to sit down with you and explore all available options with associated fees and costs.
