# Provisioning the Server MAC Address

BEFORE YOU BEGIN, CONTACT THE PROPERTY IT DEPARTMENT OR THE PROPERTY ISP TO “WHITE-LIST” THE SERVER MAC ADDRESS TO ALLOW UNHINDERED CONNECTION TO THE INTERNET. THE SERVER MAC ADDRESS IS PRINTED ON THE SERVER.

The server requires a live ethernet port for MAC address printed on the server with DHCP and the ability to connect outward via TCP to a remote machine.

The hotel server requires the following to function correctly:

- Wired (ethernet) local connection with either 10 Mbps or 100 Mbps speed. Pure 1Gbps networks will not work.
- DHCP service on that local connection. It requires an IP address and a name-server from the local DHCP server.
- DNS to find time synchronization servers at pool.ntp.org.
- Stateful UDP handling for NTP updates. Standard on all commercial firewall appliances and a normal firewall rule in most Linux or BSD-based firewalls.

Outbound TCP from the hotel server to a remote TCP port 443 for the SSL connection and TCP port 22 for SSH tunnel to the web server. Web server endpoint IP addresses may change from time to time.

## NOTES

- No specific ports need to be forwarded.
- All communications to the web servers are encrypted. Only NTP is done over a non-encrypted channel.
- Other than the NTP updates, there are no inbound connections of any kind.

---

# Installing the Online Connection Kit

BEFORE YOU BEGIN, DETERMINE THAT THE SERVER INSTALLATION LOCATION IS SUITABLE.

THE SERVER SHOULD BE INSTALLED IN A CLOSE PROXIMITY OF THERMOSTATS. THE ACTUAL DISTANCE WILL VARY DEPENDING ON THE TYPE OF THE BUILDING CONSTRUCTION.

DO NOT INSTALL IN A BASEMENT ROOM.

DO NOT INSTALL CLOSE TO LARGE METAL STRUCTURES I.E. ELEVATOR SHAFTS.

## 1. Installing the Server

- 1.1 Connect the Server to the LAN port with the supplied RJ-45 cable;

- 1.2. Plug the Server into an electrical outlet with the supplied power cord;  
It is strongly advised to plug the server into a UPS.

DO NOT TURN ON THE SERVER YET.

**For EMOCT, online connection kit, installation support, or to schedule remote management training session, please contact Verdant Tech Support at 1-888-440-0991.**

---

## 2. Installing the Wireless Receiver

- 2.1. Screw the Antenna onto the Wireless Receiver;
- 2.2. Connect the Wireless Receiver to the Server using the supplied USB cable;
- 2.3.
  - Fix the Wireless Receiver with double-sided adhesive tape so that the antenna points up;
  - Do not place the wireless receiver and the antenna in metal cabinets;
  - Avoid positioning the Wireless Receiver near metal structures;
  - Make sure that the Wireless Receiver Antenna is not parallel to any surrounding metal surfaces;

Turn on the server by switching on the power switch at the back of the server.
