

TESSIAN CASE STUDY

Securing a FTSE 100 Tech Company

ABOUT

Rightmove is the UK's largest online real estate portal and property website.

For over 15 years, the organization's aim has been to empower the UK's decisions around property. Rightmove is listed on the London Stock Exchange and is a constituent of the FTSE 100 Index.

STATISTICS

-  530 People Protected
-  Guardian Products Deployed
-  Enforcer

TESSIAN AND RIGHTMOVE

Seeking a seamless security system

“We needed a solution that would thoroughly manage our outgoing emails without significant disruption to our employees and customers.”

DAVID CRAY

Head of Customer Experience and Product Development, Rightmove

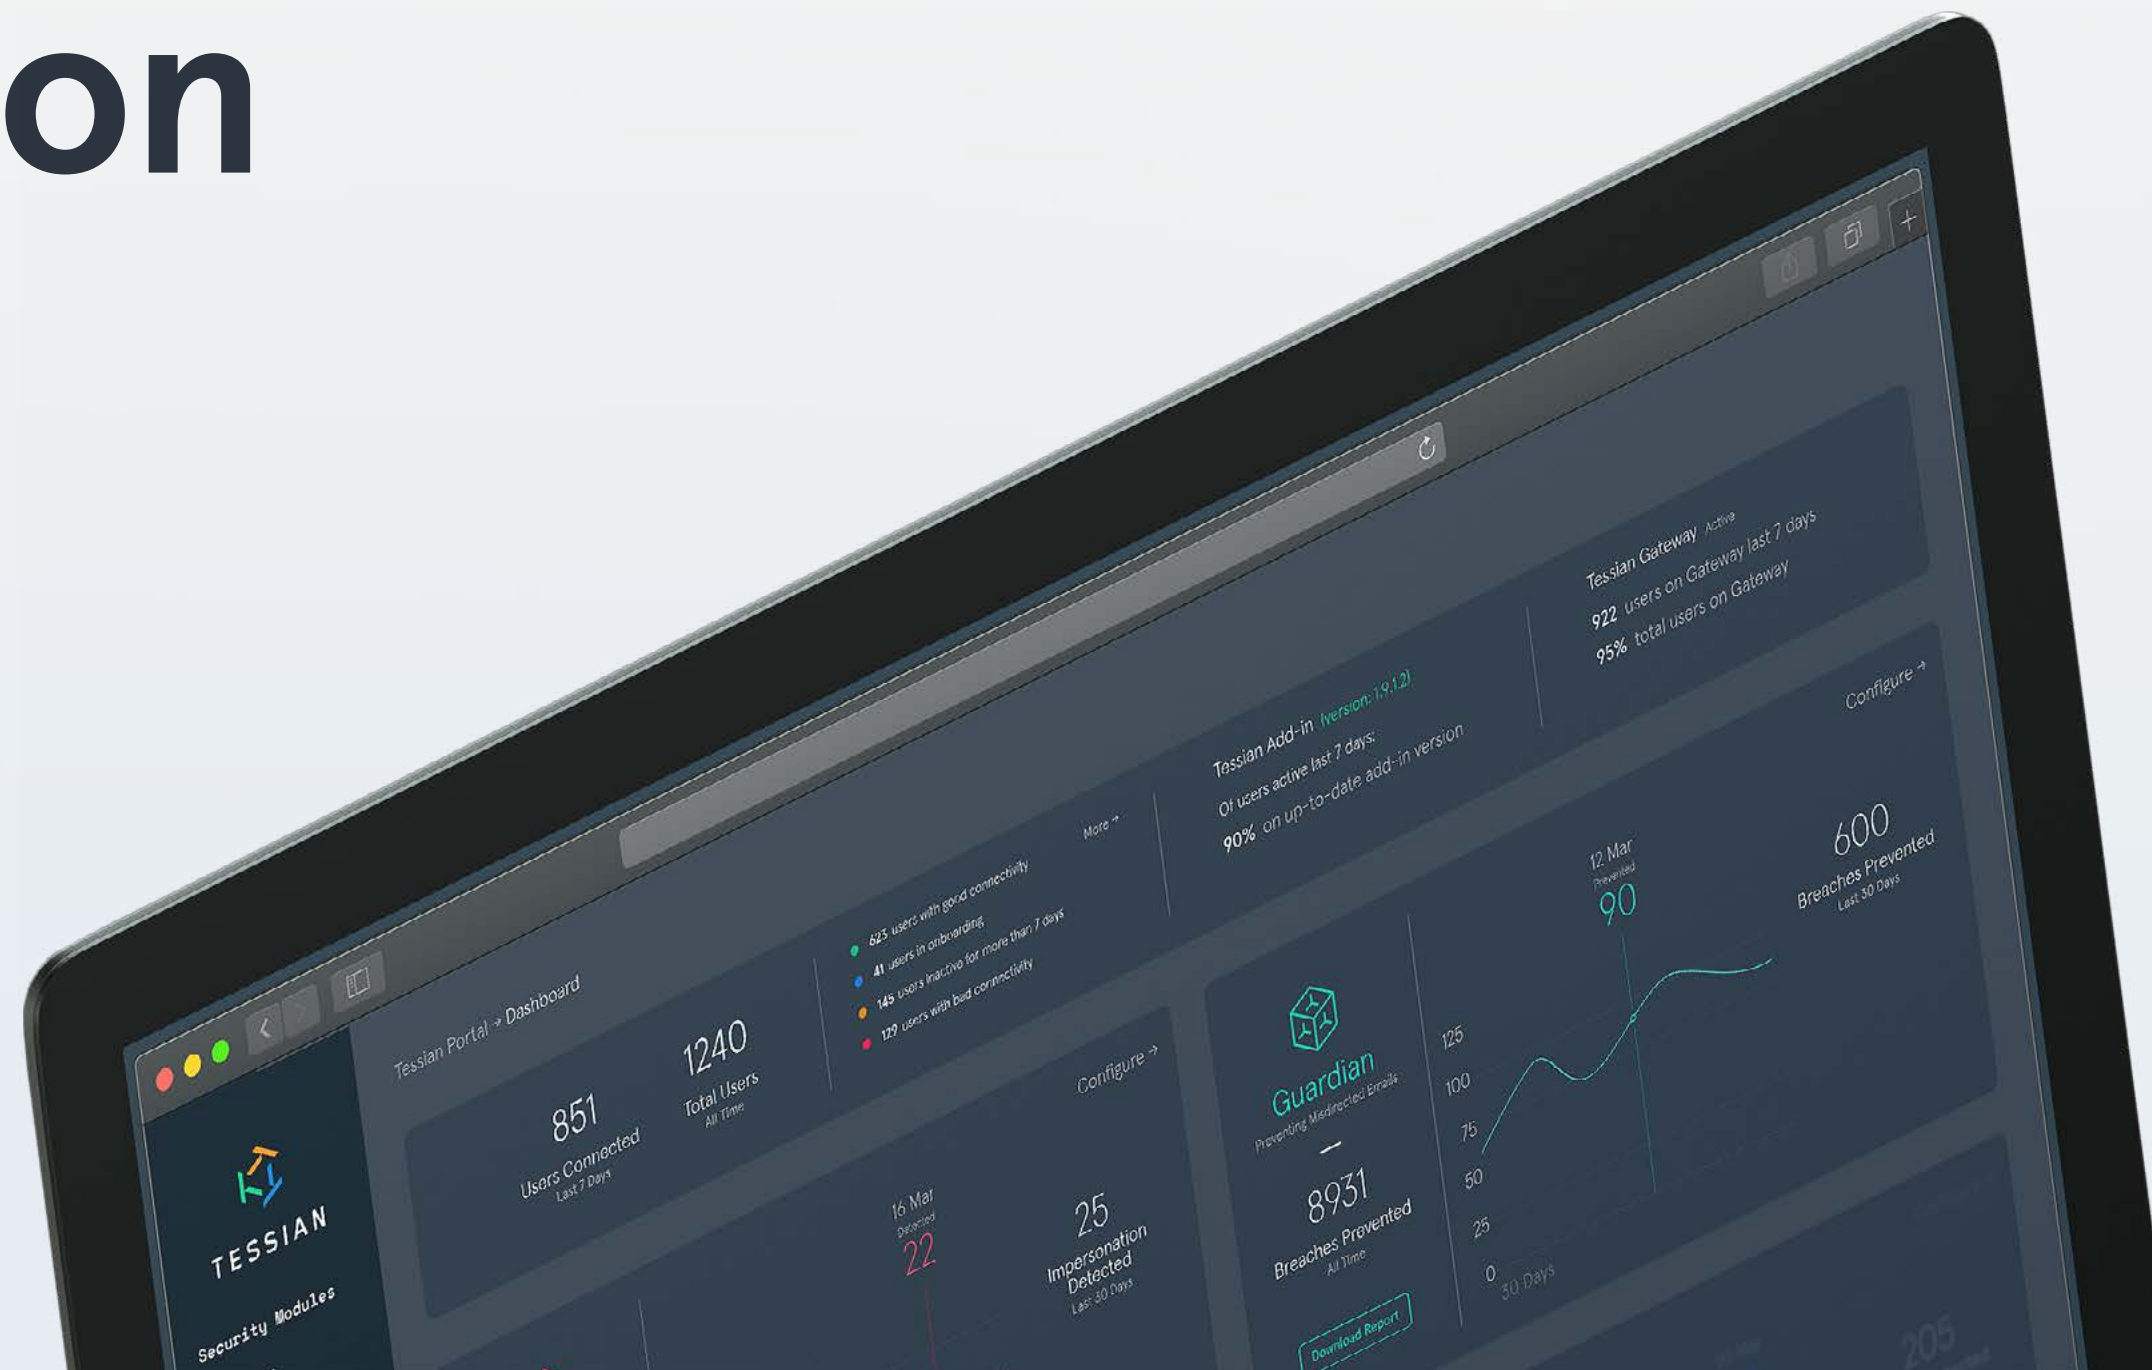

For David Cray, Rightmove’s Head of Customer Experience and Product Development, making sure the UK’s number one property portal has a proactive cybersecurity strategy is vitally important.

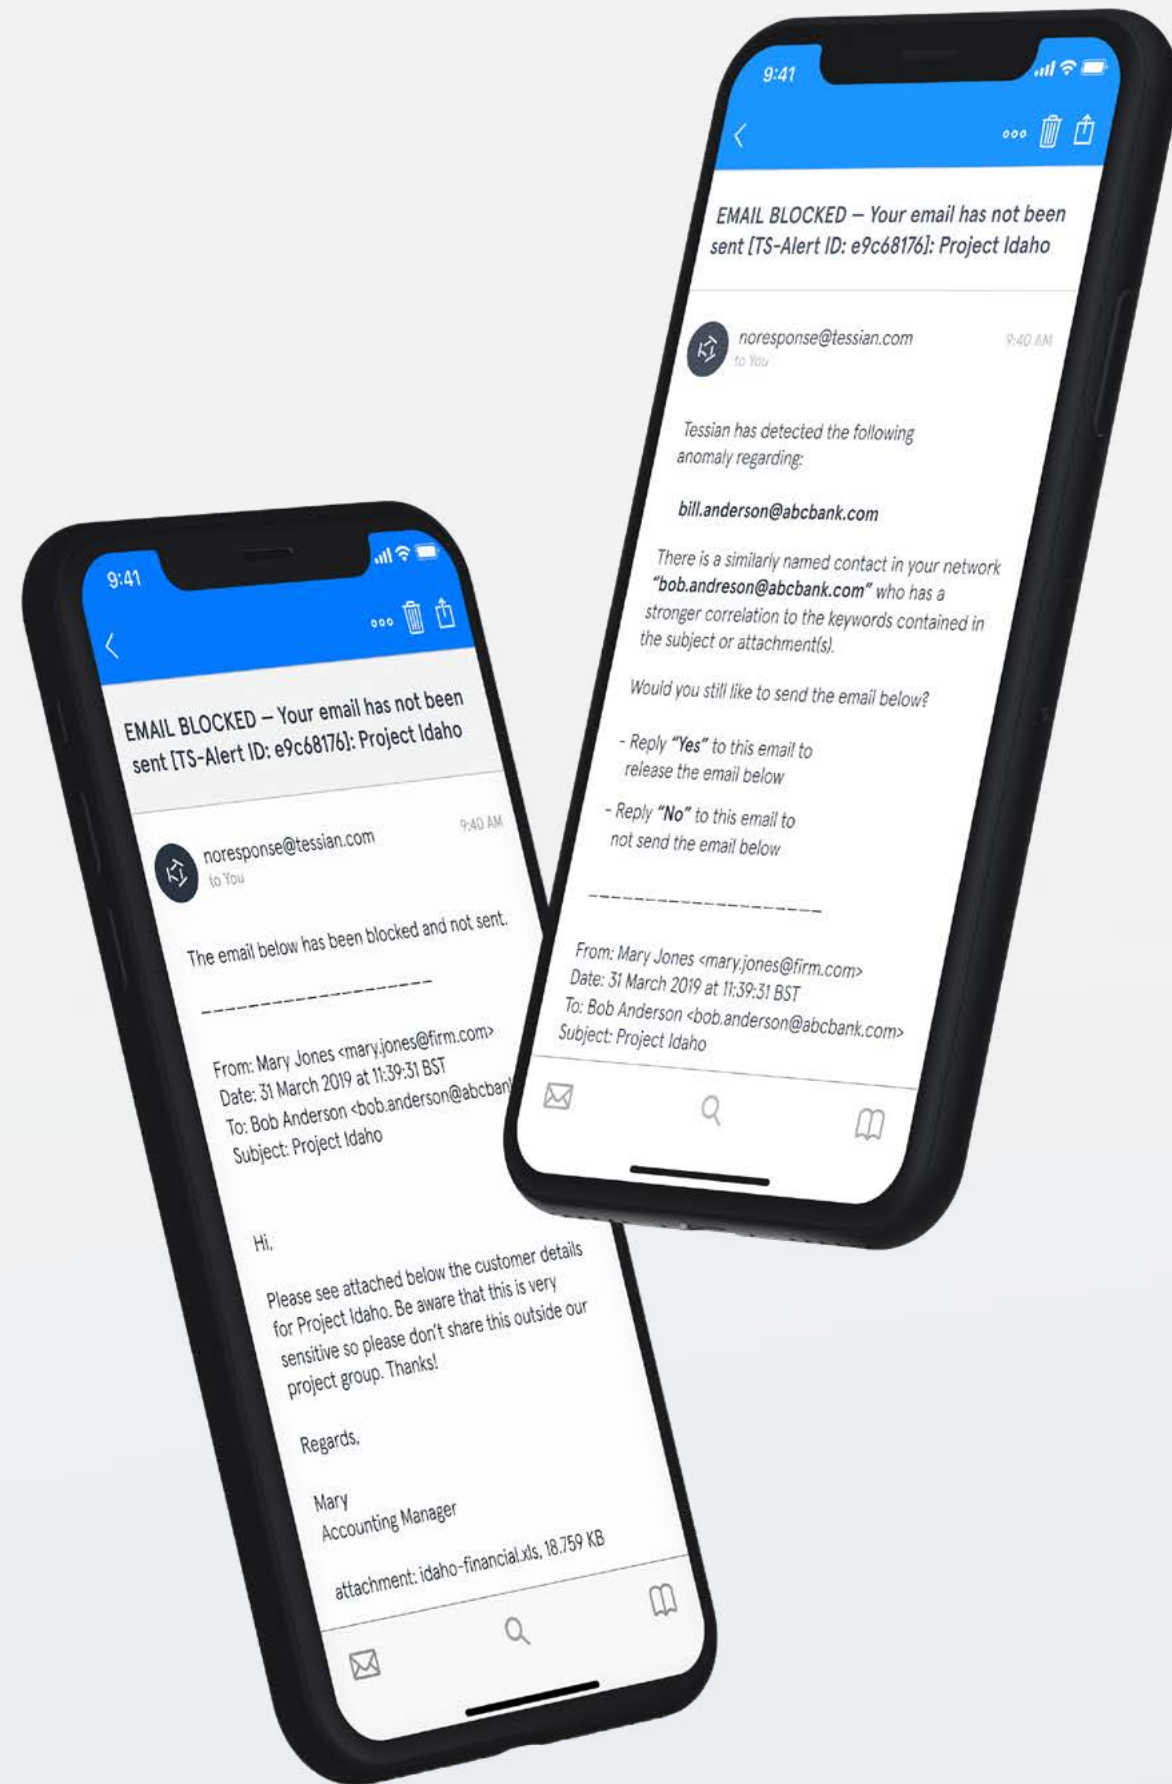

Rightmove was searching for a flexible solution to the problem of accidental data loss and unauthorized email activity. David needed a product would work across all systems and devices. Rightmove turned to Tessian for answers.

Prompt deployment and threat detection

Rightmove was able to quickly and easily deploy Tessian's Guardian and Enforcer filters across all UK team members. Tessian's machine learning enabled Rightmove to benefit from minimal disruption to staff and their day-to-day work, while still equipping the organization with best-in-class email security technology.

The Guardian filter's machine intelligence prevents emails being sent from Rightmove employees to the wrong person as a result of human error, while Enforcer identifies and stops sensitive emails from being deliberately sent to unauthorized email accounts.

LOOKING TO THE FUTURE

Building an agile security culture

Email will continue to remain one of the biggest security concerns for many organizations. By deploying Tessian across the organization, David has taken the necessary steps to ensure that Rightmove is prepared to combat the most advanced email security challenges.

Tessian is building the world's first Human Layer Security platform to automatically secure all human-digital interactions within the enterprise. Today, our products use stateful machine learning to protect people using email and to prevent threats like spear phishing, accidental data loss due to misdirected emails, data exfiltration and other non-compliant email activity. We've raised \$60m from legendary security investors like Sequoia and Accel and have over 150 employees located in San Francisco and London.
