Preventing Accidental and Deliberate Data Loss

The firm needed an intelligent solution that would satisfy client data protection requirements and protect against deliberate and accidental data leaks.

The firm's lawyers were worried that introducing new data loss solutions into their workflow would be too disruptive, and therefore it was important to find an unobtrusive solution.

Caplin & Drysdale now has the ability to prevent confidential information from being lost through email.

The Tessian platform has been working in the background to prevent against both accidental and intentional data loss. Tessian's Guardian module provides protection in terms of accidentally misdirected emails, and Enforcer ensures that employees are not sending sensitive information to unauthorized personal email addresses.

“It just works ... it is the only tool I've implemented that has had nothing but a positive response from lawyers.”

ED TERRY
Manager of Information Services

Learn more about how Tessian prevents human error on email.

Powered by machine learning, [Tessian's Human Layer Security technology](#) understands human behavior and relationships.

GUARDIAN

Automatically detects and prevents misdirected emails.

ENFORCER

Automatically detects and prevents data exfiltration attempts.

DEFENDER

Automatically detects and prevents spear phishing attacks.

Importantly, [Tessian's technology](#) automatically updates its understanding of human behavior and evolving relationships through continuous analysis and learning of an organization's email network. That means it gets smarter over time to keep you protected, wherever and however you work.
