Implementing Email Security, Seamlessly

ABOUT COMPANY NAME

Evercore is one of the world's leading independent investment banking firms. Headquartered in New York City, and with over 2,000 employees and offices across major global financial centers, Evercore serves a global base of clients on a variety of high-profile transactions. These include M&A, strategic shareholder advisory, restructurings, capital raises, equity research, sales, trading, wealth management, and trust services. Since its founding in 1995, Evercore has advised on over $3 trillion in M&A, recapitalization, and restructuring transactions.

EVERCORE

Moving past manual solutions

Evercore is a firm with exceptionally high standards. That extends to deploying new pieces of software.

In heavily transactional environments like investment banking, any downtime or performance issues caused by a new software product is potentially damaging.

IT teams often cite ease of deployment as a main priority for new software. Chris Turek, Evercore's Chief Information Officer, understands just how important it is to deploy new systems quickly and smoothly.
"We were looking for the right data loss prevention solution for two years. We loved the machine learning–powered approach Tessian offered."

CHRIS TUREK
Chief Information Officer, Evercore

> "Tessian's product is one of the top three I have bought in my career. I had eight people write to me, thanking us for deploying Tessian."

CHRIS TUREK
Chief Information Officer, Evercore

Incredibly simple, uniquely effective

For Chris, the beauty of the Tessian platform lay in its administrative simplicity. When Tessian is installed on an email network, it begins analyzing historic email communications retroactively to learn what constitutes 'normal' behavior for each user.

Within hours, Tessian was up and running, protecting Chris and Evercore's employees against misdirected emails. Tessian has also been instrumental in detecting and preventing spear phishing emails.
What's more, Tessian's platform doesn't require large sets of pre–labeled data or complex integration processes. The add–in can be installed by simply downloading a file, and it can be rolled out to users at the IT team's discretion.

As Tessian integrates directly with Microsoft Outlook, Office 365 and G Suite, all major enterprise email environments are taken care of.

Learn more about how Tessian prevents human error on email.

Powered by machine learning, Tessian's Human Layer Security technology understands human behavior and relationships.

⌖ GUARDIAN

Automatically detects and prevents misdirected emails.

⌁ ENFORCER

Automatically detects and prevents data exfiltration attempts.

⊞ DEFENDER

Automatically detects and prevents spear phishing attacks.

Importantly, Tessian's technology automatically updates its understanding of human behavior and evolving relationships through continuous analysis and learning of an organization's email network.
That means it gets smarter over time to keep you protected, wherever and however you work.
