“Tessian’s low user disruption and intelligent predictions have proven to be a sophisticated and risk attractive improvement to disabling autocorrect in Outlook.”

DUNCAN EADIE
IT and Business Services Director

TESSIAN AND FOOT ANSTEY

Moving Beyond Rule-Based Systems to Protect Employees

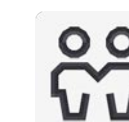

The firm’s innovative IT and Risk teams identified that the risk of sensitive information being accidentally sent to the wrong person needed to be addressed, fast.

After dismissing the rule-based solutions on the market due to high user interruption, Foot Anstey opted for Tessian’s unique approach of intelligently preventing misdirected emails through machine learning.

Soon after being introduced, Tessian presented a detailed report outlining just how many misdirected emails were being sent within the firm, but caught by Tessian Guardian.

On top of protecting emails from being sent to the wrong recipient, Tessian has also provided Foot Anstey with valuable insights into their email traffic and employee behavior that has helped them create more targeted training and customized policies.

Tessian now prevents multiple potential data leaks every day.

Learn more about how Tessian prevents human error on email.

Powered by machine learning, [Tessian's Human Layer Security technology](#) understands human behavior and relationships.

GUARDIAN

Automatically detects and prevents misdirected emails.

ENFORCER

Automatically detects and prevents data exfiltration attempts.

DEFENDER

Automatically detects and prevents spear phishing attacks.

Importantly, [Tessian's technology](#) automatically updates its understanding of human behavior and evolving relationships through continuous analysis and learning of an organization's email network. That means it gets smarter over time to keep you protected, wherever and however you work.
