

Tessian Case Study

Foot Anstey

“Tessian’s low user disruption and intelligent predictions have proved to be a sophisticated and risk attractive improvement to disabling autocorrect in Outlook.”

Duncan Eadie

IT and Business Services Director

Top 100 UK Law Firm, **Foot Anstey**, enjoys a reputation as an energetic, proactive firm, combining technical efficiency with a problem solving approach. This is supported by the firm’s top band rankings in independent legal directories, Chambers UK and Legal 500. Putting clients at the heart of the business and developing and investing in talent have been key to growth. The firm now operates out of seven locations and has over 500 employees.

The firm’s innovative IT and Risk teams identified that the risk of sensitive information being accidentally sent to the wrong person needed addressing. After dismissing the rule-based solutions on the market due to high user interruption, Foot Anstey opted for Tessian’s unique approach of intelligently preventing misaddressed emails through machine learning.

After an initial period, Tessian presented a detailed report containing email statistics and misaddressed emails caught by Guardian. As well as protecting several emails from being sent to the wrong recipient, Tessian has also provided Foot Anstey with a valuable insight into their email traffic and common sending behaviours. Tessian is now used by Foot Anstey to prevent multiple potential data leaks every day.

Tessian Filters Deployed

To Prevent Misdirected Emails →

Guardian uses stateful machine learning to automatically prevent highly sensitive emails being sent to the wrong recipients due to inadvertent human error.

To Prevent Non-Compliant Emails →

Constructor allows enterprises to design and deploy customizable email security filters to control security and compliance on outbound email.

Tessian is building the world's first Human Layer Security platform to automatically secure all human-digital interactions within the enterprise. Today, our products use stateful machine learning to protect people using email and to prevent threats like spear phishing, accidental data loss due to misdirected emails, data exfiltration and other non-compliant email activity. We've raised \$60m from legendary security investors like Sequoia and Accel and have over 150 employees located in New York, San Francisco and London.
