Staying Proactive with Data Loss Prevention

The Problem

Given the highly sensitive nature of the R&D performed, securing their email environment from human error is a key priority for the company. The company had heard of incidents in the past where project-related information had been sent to the wrong person and wanted to proactively address this step.

The management team is acutely aware of the potential risks from misdirected emails, and had spent some time looking at various vendors before choosing to work with Tessian because of the way in which the machine learning approach solves the problem.

The Solution

Tessian was rolled out firm-wide to over 150 users, with Guardian effectively detecting and preventing misdirected emails and mitigating the risk that comes along with data loss via email. Tessian also gave Morrisons insight into some significant email statistics that equipped them with the data they needed to design key rules and policies using Tessian Constructor.

Tessian now protects Morrisons from multiple risks around confidential and sensitive data leakage every day.

“With the new GDPR landscape, Tessian is a crucial component of our data breach prevention strategy. It proved its worth to us within a month of installation.”

DEBBIE DOLAN
Operations Director

Learn more about how Tessian prevents human error on email.

Powered by machine learning, [Tessian's Human Layer Security technology](#) understands human behavior and relationships.

GUARDIAN

Automatically detects and prevents misdirected emails.

ENFORCER

Automatically detects and prevents data exfiltration attempts.

DEFENDER

Automatically detects and prevents spear phishing attacks.

Importantly, [Tessian's technology](#) automatically updates its understanding of human behavior and evolving relationships through continuous analysis and learning of an organization's email network. That means it gets smarter over time to keep you protected, wherever and however you work.
