

# Support for the MODERN WORKPLACE

Enabling **EFFECTIVE COLLABORATION** for a **MOBILE WORKFORCE**

**A**s companies become more virtual and dispersed across multiple geographies, connecting employees becomes more critical. In a recent survey, three out of four employers rated teamwork and collaboration as "very important". Yet almost four out of ten employees in the same survey said people in their organizations don't collaborate enough.<sup>1</sup> This statistic becomes valuable when we take into consideration that the number of telecommuting workers has increase by 115% in the last decade alone. This amounts to an astounding 3.9 million telecommunication workers.<sup>2</sup>

Enabling successful collaboration for multi-site companies with a remote workforce requires a robust, integrated technology stack. Unified communications, mobile applications, and a fully integrated system infrastructure are crucial to enable total engagement across the entire enterprise.

DynTek's cloud-based collaboration and productivity solutions enable complete automation and integration between your worker's phones, laptops, and other UC devices. This allows them to have an idea at their desk, flesh it out from the back seat of an Uber on the way to an airport, and send a draft to colleagues from the hotel room later that day. When your employees can work from anywhere, on any device, they're more productive.

## Enterprise Mobility >>>

Connecting today's mobile workforce requires a flexible enterprise infrastructure. DynTek has the industry and technology expertise and resources to develop the appropriate solution for you to enhance business productivity and support your mobile workers. Between BYOD and anytime/anywhere access, you need to enable mobility while ensuring the security of your systems. The Microsoft Enterprise Mobility Suite is a cloud-based mobile management system built around the user identity to enable employee productivity anywhere, on any device, authenticate access to apps and data, and enable remote device management across platforms. SharePoint, Office 365 and Skype for Business provide an integrated tool set that can help optimize your enterprise mobility.

## Desktop Virtualization >>>

Our solutions address the unique challenges of today's mobile cloud era where a desktop needs to be delivered securely, consistently, and persistently to the mobile user on any device, anywhere, at any time. As a Citrix, Microsoft and VMware partner, DynTek is able to provide solutions for enterprise mobility, speedy hybrid cloud deployments, and desktop and application virtualization. We simply and securely deliver Windows desktops, applications and online services to your end users across virtual data centers, virtual machines, and physical devices to create a more efficient and effective work environment.

# The DynTek Service Engagement Methodology >>>

Our Modern Workplace deployments ensure that employee engagement and experience are top of mind. Our methodology combines organizational change management, training, technical and operational support, and staff as needed to make certain of our customers success. Every solution can be implemented in the way that best fits your organizational needs—on-premises, hybrid, or cloud-based.

DynTek offers a broad range of service engagements to help envision, deploy and support a reliable modern workplace solution aligned to your critical business requirements. We offer extensive strategic consulting, assessments, planning and architecture development, product vetting and recommendation, proof-of-concept, implementation, migration, optimization, and a comprehensive support program.
