Easily scale your storage

Storage and Virtualization Solutions

With the increased virtualization of servers and PCs, the amount of data that needs to be centrally stored has grown. And we honestly get it...we know that organizations have an elevated need for more secure storage. We also know that your storage has to scale with your business. Therefore, DynTek offers organizations custom-built, cost effective storage and virtualization solutions that expand on your storage capacity and reduce the need for manual provisioning.

What's even better is that your storage resources can be updated on the fly without affecting application performance. That means less downtime for your company. You'll also be able to quickly gain visibility, control and automation in your storage environment. And if you are thinking about a cloud deployment, we can help you architect an effective and comprehensive foundation for your cloud platform.

We're guilty. We think the whole idea of virtualization is quite exciting. We play out scenarios of how to use cloud gateways for faster file services and host-based replication for disaster recovery... and we do this all on our off time. Technology is not just our job...it's our way of life.

DynTek's Storage & Virtualization Solutions

- Server & Desktop Virtualization
- Enterprise Storage
- Server & Storage Consolidations
- Business Continuity
- Virtualization & Systems Management
- Data Migration
- eDiscovery

The Secret to Your Success

There are various options out there in creating a storage & virtualization solution that fits your organization's needs. DynTek has partnered with industry leading partners, including Microsoft, Citrix, VMware, Dell, NetApp, EMC, and HP to build you the best possible solution. To maximize the efficiency of your storage and virtualization investment, we utilize the industry's most innovative technology and combine it with our proven processes and business acumen. Through years of experience, we have developed a winning methodology and host of service offerings to assist you throughout the entire lifecycle of a storage and virtualization project.

Methodology & Service Offerings include:

- **Discovery:** A session to understand your company's goals, budget and requirements.
- **Assessment:** Our team of certified and highly trained storage specialists review your existing environment and storage needs.
- **Design:** We then architect a cost-effective solution that meets your business, technical and budgetary requirements.
- **Implementation:** Next, our highly skilled storage and virtualization consultants rapidly deploy the solution and provide knowledge transfer with your staff.
- **Support:** We'll provide ongoing product lifecycle support.

What Sets Us Apart

Outstanding technical acumen? Amazing customer service? Yes, we have those things and much more.

But let's dive past the rhetorical statements and focus on what truly makes us unique. In the world of technology, certifications and accolades, combined with deep real world experience, are the golden ticket. And, we like to call DynTek the company of accreditations. After all, we have worked hard to obtain these third-party validations, which prove

our organization has the technical expertise, account management knowledge, proven experience and high level of customer service excellence required to truly be called the best. And whether we are diving into cutting edge technologies in the cloud or architecting an advanced networking solution, DynTek's certifications are second to none.

Pride In Partnership

DynTek holds the top medallion levels across a broad range of industry-leading technology manufacturers. When looking for a partner that is **Cisco Gold, Microsoft Gold, Citrix Platinum, McAfee Elite, VMware Premier, Dell Premier**, and more...you will find one - DynTek.

This means we have an unrivaled cross-section of technical expertise and real-world deployment experience, as well as competitive pricing on the technologies you need most.
