

# HANZO INVESTIGATOR™ FOR EDISCOVERY

Intelligent Investigations – Automatically identify, capture, and monitor AI-powered insights

## FINDING THE TRUTH

Uncovering the truth is at the heart of resolving disputes quickly. Widespread use of social media\* that can shed light on a person's actions or character, makes it fertile territory for law firms, enterprises and government organizations who are gathering evidence to build cases, check suitability for employment, track IP leakage, or vet visa applicants. \* Statista 2018

## TRADITIONAL APPROACHES ARE ARCHAIC

Unfortunately, traditional approaches to social media background investigations are costly, time consuming, and manual. They also can be inaccurate, biased, and risky. It's enough to cause organizations to completely forego investigations – leaving important evidence by the wayside.

## HANZO INVESTIGATIONS, EASY AS 1-2-3

Hanzo Investigator™ for eDiscovery takes all of the hassle out of web and social media investigations by automating the process. Powered by AI and a team of data scientists, Hanzo Investigator easily identifies the subject and their social media profiles, capturing and preserving the full dynamic social media content in a forensically sound manner, and monitors the captured profiles for change visibility.

### 1 IDENTIFY

You can quickly and easily match people with the right web / social media profiles and identify which platforms they are on to ensure you capture the right data.

### 2 COLLECT & PRESERVE

Capture all relevant profiles and posts in the highest fidelity native format for complete contextual, dynamic and interactive evidence.

### 3 CONTINUOUS MONITORING

Re-capturing select individuals and their profiles long term allows for change detection over time.

## HOW CAN HANZO INVESTIGATOR™ FOR EDISCOVERY HELP ME?

### FIND THE RIGHT PROFILE FAST

Imagine you are a litigation professional and you want to do background research on parties, witnesses and individuals of interest. Finding the right profiles fast means you get a clear picture of a person's social media presence and potentially relevant posts, before the person has a chance to change their profile or delete evidence. AI-powered searches yield accurate results quickly, creating an interactive report that enables you to make informed decisions about collection strategy.

### GET THE BEST EVIDENCE BY CAPTURING THE FULL CONTEXT

eDiscovery teams lament the challenges of capturing dynamic web content like social media. Not only can it be difficult to collect, but existing solutions only offer a screenshot or print out which doesn't show all available data. Get more insight into the social media by expanding comments and replies, navigating to externally linked pages that people are sharing, watching videos, hovering over text for more complete information, clicking on photos to see peoples' name tags, and seeing other interactive information screenshots don't easily show. Connect the dots more quickly with contextual review that's only available in native format.

### STAY ON TOP OF THE EVIDENCE

In cases of fraud, IP infringement, or employment matters, in-house counsel may have need to conduct internal investigations and monitor an employee's social media over a period of time to capture and preserve both the baseline of evidence and be notified of changes to responsive content. Hanzo's monitoring lets you rest easy knowing updates are being tracked and preserved. Recurring captures allow you to dig into what's been added, edited or deleted which can help you put together a casemap and show inconsistent statements (and potentially spoliation) later in litigation.

## AUTOMATE YOUR NEXT SOCIAL MEDIA INVESTIGATION

Litigation professionals spend hours searching for a digital presence. Don't let this be a challenge for you. Try Hanzo Investigator for eDiscovery and make your next social media investigation faster, easier and more affordable.
