# Hanzo Dynamic Capture

The web archiving tool built to preserve the most dynamic and interactive data sources on the web today.

Embrace Innovative Interactive Websites and Demonstrate Compliance To Regulators

Organizations must comply with increasingly complex regulations around the archiving and preservation of their digital marketing, social media, online content and communications. While historically a PDF or screenshot was sufficient to meet regulatory expectations, the increasingly interactive, personalized, and dynamic landscape of the modern web requires an archived version of those communications and content in their native format, so the context and complete experience around it is preserved.

Preserve

Archive interactive web content in its native format to preserve functionality, interactivity and authenticity.

Analyze

Make use of your dynamic archive with powerful search, filter, and analysis functionality.

Control

Control user and team permissions for smooth operational efficiency of compliance and eDiscovery workflows.

Export

Effortlessly package and move data directly from Hanzo Dynamic Capture to use in your case management and review platforms.

We Capture The Dynamic Web — In All Its Interactive Glory — For You

Hanzo Dynamic Capture is a technology that can archive and preserve digital, social, and online forms of content and communications in an interactive, native and tamper-proof manner that can be easily searched and presented, while complying with industry-specific regulatory expectations.

Preserve Dynamic Content Immutably

Preserve content in WARC file format consistent with ISO 28500 on write once, read-many (WORM) storage that can't be changed. Each of the items that make up the captured communications are collected, hashed and time-stamped so you can verify the integrity of copies of the original.

Search, Review, and Export Archived Web Content On-demand

Use the Hanzo viewer to review and playback your archives in their native format. Users can engage with the original, contextual experience of your rich and dynamic website and social media content as presented on the exact date and time of capture.
Capture Complicated Web Elements Without a Site Map

Challenging content such as sliders, videos, dropdowns, ROI calculators, forms, customized customer journeys and more are no longer a headache. No sitemap required to capture every page and preserve it in native format for high fidelity replay.

Identify Specific Content Applicable to Requests For Production

Gain the power to search text or meta data, such as social media post 'author,' particular dates or date ranges. Search a single archive or search across all archived sites simultaneously.

Quality Assured Every Time

Human QA to ensure your captures never miss a thing by comparing your archived content with your live site.

Secure + Control

Secure data archiving with the peace of mind that Hanzo is SOC2 Certified. Extend controlled access to users and teams as well as third-parties, including regulators, to view particular archives within your Hanzo environment.

About Hanzo

Hanzo brings context and a greater understanding of enterprise data to corporate legal and compliance teams by providing in-house control over dynamic and collaborative data sources. This control allows organizations to reduce billions of dollars in risk, litigation, and compliance costs and elevate their corporate legal and regulatory compliance responses. Hanzo's software empowers defensible preservation, targeted collection, and efficient review of dynamic content from enterprise collaboration applications and complex websites. Hanzo is SOC 2® Type 2 certified, demonstrating its commitment to data security and serves large corporations worldwide.
