

Small Space, Big Results

West Haven, CT

HJT was tapped to assist a new startup dental practice in an existing retail space. Due to the space constraints, we needed to maximize the treatment room space, making sure to create a traffic pattern that was easy for staff and patients.

We designed a 5 treatment room practice that allowed for movement between patients.

Design Solutions

- Pushed front office and waiting room to one side to allow for unimpeded traffic
- Linear traffic flow treatment spaces on one side and staff areas on the other
- Staff and mechanical placed near the rear for ease of service and sound isolation

Customized Spaces

HJT was able to create a unique design for the standard "office" layout. The practice needed to create their own look and feel for their new space.

Why Choose HJT?

HJT Dental Design Consultants can design a custom space for any practice. Don't settle for a cookie cutter approach to the design of your office. Create a functional space for your staff and patients. Contact HJT today to find out about uncommon design solutions for your practice.
