

InstaKey's SecurityRecords.com Software Manages Your Lock & Key Program for You

Loss prevention professionals have very little time or resources to address, review, or measure their lock & key programs. By evaluating your lock & key program, you can reduce unnecessary expenses per location while simultaneously improving site security.

InstaKey® Security Systems offers SecurityRecords.com® to compile the key management information for you.

Does your current lock & key program have the following critical features?

Restricted keys that reduce/eliminate unauthorized key duplication?

By controlling serialized restricted key blanks, InstaKey helps to alleviate the concern that duplicates can be made without proper authorization.

Standardized policies and procedures that can easily identify exceptions?

By implementing uniform key management practices, InstaKey can help simplify required personnel response, lower average annual location expenses, make rekeying the exception not the norm, and identify recurring trends for training opportunities.

A cost-effective rekey avenue?

InstaKey has developed lock hardware that enables immediate rekeying of locks up to twelve times on-site by store management. InstaKey's unique system utilizes cylinders that are reconfigurable by simply inserting a special "step-change" key and turning it. The step-change key effectively deactivates old keys and reconfigures the cylinder to fit the new keys. Corporate and/or store management controls access to the rekey kit and can determine when a rekey is required.

Real-time records management?

By instituting InstaKey's SecurityRecords.com software, you will have a real-time database that tracks people, places, and keys. Whether you

want to know who has which key, how many keys open the location, or how many locations are out of compliance, this database keeps it all for you. This capability can be decentralized between corporate departments or regional staff as management specifies, providing powerful, controlled access.

"We reduced our annual key costs after converting numerous locations to the InstaKey system. The system paid for itself and increased our store security in the process. The return on investment has been very good."

—Jerry Snider, Asset Protection Director, Dollar General

Isn't it time that you looked at your lock & key program?

Please visit us at www.instakey.com, or contact Cita Doyle, Director of Sales & Marketing, InstaKey Security Systems, at 303-761-9999 x125.

"We use the InstaKey SecurityRecords.com database to ensure that our stores are using the system properly, returning control keys after use, sending in key receipts for each key they receive, and to track shipments. So, we manage the program, but InstaKey takes care of all the basic day-to-day services."

—Larry Clark, Distribution Center Security Manager, Ann Taylor
