

When a Master Key Goes Missing:

College Edition

Here's something they don't teach in college: a lost key can turn out to be a big expense, especially at universities with dozens of buildings and thousands of locks. *And it threatens security as well.*

Traditional Rekeying

Here's what happens when a master key vanishes on a typical college campus.

The university is forced to begin a comprehensive rekeying project that can cost thousands of dollars. For example: to rekey a 500-door facility can cost \$19,000.*

The rekeying project can take weeks, meaning key holders are inconvenienced and additional security is needed. **The procedure affects all key levels.**

Rekeying is finally completed and new master keys must be distributed. **Universities await the next incident of a lost master key and the procedure is repeated.**

InstaKey Rekeying

With InstaKey, the same rekeying project is significantly less expensive and disruptive.

Campus administration can rekey the locks **almost immediately**, taking only a few seconds to rekey each lock.

Campus administration contacts the Campus Lockshop or InstaKey to send them a new set of master keys, while all other key levels remain unaffected. **Only the master keys are replaced. Total cost to rekey with InstaKey: \$43.**

*Based on an average national cost for 500 SFIC cylinders, 500 operating keys, and 5 Master keys.
