## SPC Capability Exercise Answers

Note: Calculations are $C_{P K L}=\frac{\overline{\bar{X}}-L S L}{3 \sigma}$ and $C_{P K U}=\frac{U S L-\overline{\bar{X}}}{3 \sigma}$

## Exercise 1:

$$
\begin{aligned}
& \text { USL }=16.4 \quad \text { LSL }=15.6 \quad \overline{\bar{X}}=15.8 \quad 3 \sigma=0.4 \\
& C_{\text {PKL }}=\underline{15.8-15.6}=\underline{0.2}=0.5 \\
& 0.4 \\
& 0.4 \\
& C_{\text {PKU }}=\underline{16.4-15.6}=\underline{0.6}=1.5 \\
& 0.4 \\
& 0.4
\end{aligned}
$$

Therefore $\quad C_{p k}=0.5$

## Exercise 2:

$$
\begin{array}{crl}
\mathrm{USL}=10.2 & \mathrm{LSL}=9.8 \quad \overline{\bar{X}}=9.8 \quad 3 \sigma=0.2 \\
\mathrm{C}_{\mathrm{PKL}}=\underline{9.8-9.8} & =\underline{0.0}=0 \\
0.2 & 0.2 \\
\mathrm{C}_{\text {PKU }}=\underline{10.2-9.8} & =\underline{0.4}=2 \\
0.2 & 0.2
\end{array}
$$

Therefore $\quad C_{p k}=0.0$

## Exercise 3:

$$
\begin{aligned}
& \text { USL }=19.1 \quad \text { LSL }=18.9 \quad \overline{\bar{X}}=18.85 \quad 3 \sigma=0.1 \\
& C_{\text {PKL }}=\frac{18.85-18.5}{0.1}=\underline{-0.05}=-0.5 \\
& 0.1 \\
& C_{\text {PKU }}=\frac{19.1-18.85}{0.1}=\underline{0.25}=2.5 \\
& 0.1
\end{aligned}
$$

Therefore $\quad C_{p k}=-0.5$

## Exercise 4:

$$
\begin{aligned}
& \text { USL }=15.2 \quad \mathrm{LSL}=14.8 \quad \overline{\bar{X}}=14.425 \quad 3 \sigma=0.75 \\
& \mathrm{C}_{\text {PKL }}=\frac{14.425-14.8}{0.75}=\frac{-0.375}{0.75}=-0.5 \\
& C_{\text {PKU }}=\frac{15.2-14.425}{0.75}=\underline{0.775}=1.333 \\
& 0.75
\end{aligned}
$$

Therefore $\quad C_{p k}=-1.333$
