

Cloud Data Management Platform

Solutions Guide

Helping enterprises protect and manage unstructured data at any scale

HubStor Solutions

Securely store, index, and manage your unstructured data at any scale to simplify IT infrastructure and increase business agility.

“HubStor on Microsoft Azure allowed us to hit a number of our legal and data protection goals quickly by utilizing SharePoint backup, Office 365 OneDrive backup, email journaling and e-discovery. Deploying HubStor on Azure afforded us the agility needed to respond to our engineers with a speed only surpassed by our own hyperloop pod. HubStor further enables the IT Team by actively listening to our feature requests and being very responsive in its support.”

Dawn Armstrong, Director, Information Technology
Virgin Hyperloop One

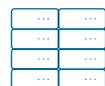

Backup

Protect and secure the data you rely on every day

Whether you need a segregated backup for on-premises or cloud file servers (including Microsoft Office 365, Box), HubStor ensures you can quickly recover from data loss so users stay productive.

- **Recover** items, folders, mailboxes and sites to original or alternate locations.
- **Back up** data with incremental and continuous data protection policies.
- **Enroll** new mailboxes and site collections in the scope of your backup automatically.

Archiving

Stop managing hardware, start managing data

HubStor combines military-grade security with the economics, elasticity, and convenience of the cloud, giving you unlimited access to a rich archiving experience without the hassles of operating the infrastructure.

- **Control costs** with low monthly storage fees in the cloud, with powerful search and control.
- **Query metadata** and run scoped full-text indexing at scale.
- **Analyze** storage costs and charge back consumption to projects, clients, or departments.

Journaling

Record communications for legal and regulatory compliance

Create a record of corporate emails and other messages, including Office 365, Exchange Server, Microsoft Teams conversations, and SMS/MMS, and multiple instant messaging platforms to meet compliance and e-discovery requirements.

- **Meet legal requirements** for message preservation, discovery, and collection.
- **Apply legal hold** to searches and create cases, or place users or groups on legal hold.
- **Export messages** to PST files, mailboxes, or file paths.

Compliance

Simple delivery of immutable records retention in the cloud

Meet regulatory requirements with cost-effective, easy-to-consume immutable compliance storage for messages, scanned documents, call recordings, medical images, genomics data, etc.

- **Apply retention periods** with item-level policies.
- **Preserve content** in its original format with data integrity validation.
- **Report** on and defend your record of compliance with immutable activity audit logging.

Tiering

Control data growth and optimize storage infrastructure

HubStor's seamless storage tiering virtualizes low-touch, inactive data taking up space in your primary storage. The best part? Users and applications continue to see and interact with the tiered data with no disruption.

- **Define policies** to automatically tier older data to the cloud.
- **Recall tiered items** without disruption when a user or application accesses data.
- **Configure** local caching to optimize retrieval speed and limit recalls to the cloud.

Platform Features

Fully searchable data lake

Manage and search any type of data. Save searches, sort results, and view results with hit highlighting.

SOC 2 compliance

HubStor is SOC 2 compliant and maintains security that meets the strictest of enterprise requirements.

Fully managed SaaS solution

Enjoy the convenience of expert oversight for your tenant that reduces the demands on your IT staff.

Deploy in any Azure region

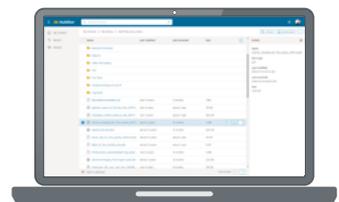

Choose the Azure region that helps you address the data residency needs of your organization.

Scalable cloud infrastructure

Pay only for what you use and scale without the procurement, setup and maintenance of new hardware or software.

Administration

End-user access

Take a closer look at HubStor

HubStor is a cloud storage software company that helps enterprises manage and protect unstructured data. HubStor on Azure is a fully managed solution, which means no added hardware and no cloud complexity for you to monitor and maintain. You can run your HubStor tenant in any Azure region for data sovereignty. You can also choose to run HubStor in your own Azure account or use HubStor's.

With HubStor, you and your data are never locked in. You can cancel anytime with no penalties or hassles with migrating data.

Every customer can count on The HubStor Promise:

- No licensing,
- No term commitments,
- No up-front requirements,
- No setup fees, and
- Usage-based pricing with no markup on activity or egress.
