

How To Use Multi-Drill

Apple / iOS

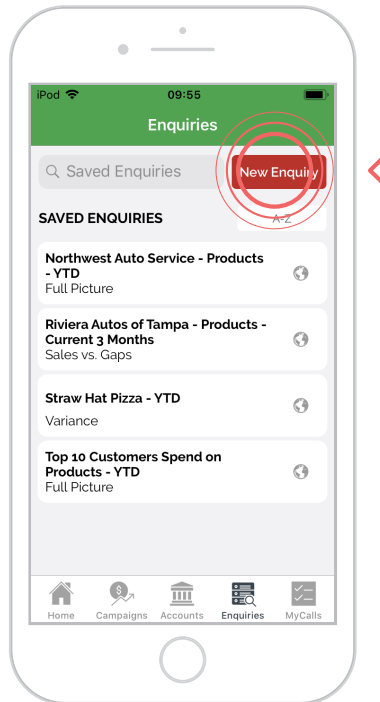

01 ENQUIRIES

Go to the Enquiries section from the main navigation.

02 NEW ENQUIRY

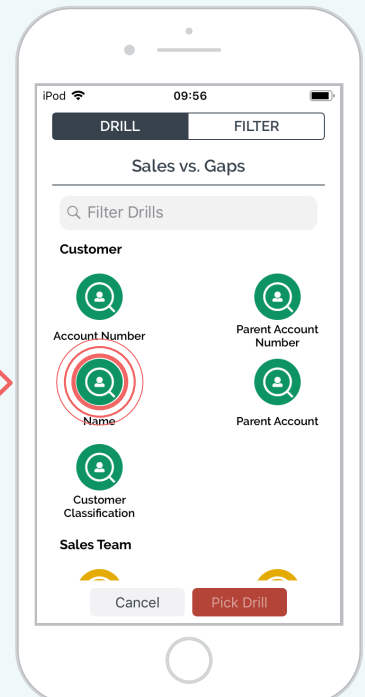

Tap New Enquiry and choose your enquiry type or tap on the saved Enquiry you'd like to start with.

03 DRILL

Tap your initial drill option to create your enquiry.

In this example, tap on the Name bubble.

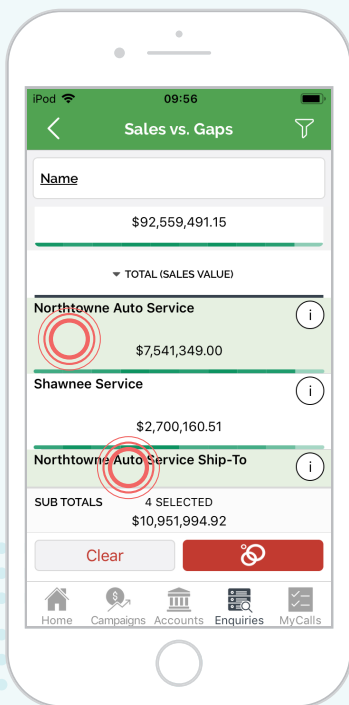

04 SELECT LINES

When you want to multi-select, tap on each line that you'd like to include in your next drill. You can tap on as many or as few lines as you'd like.

Once you've selected the lines you'd like to multi-drill into, tap the drill button on the bottom right.

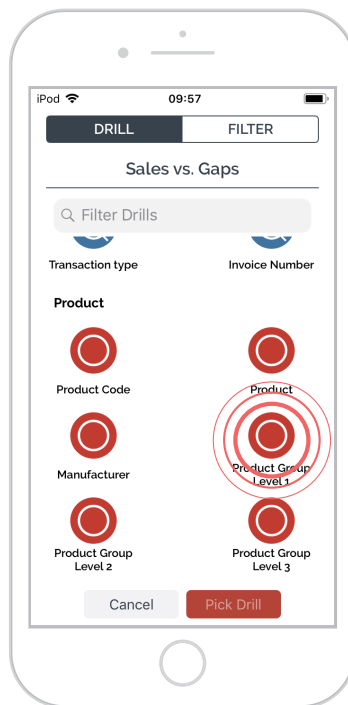

As you now multi-select you will see a dynamic subtotal appear at the bottom of the page. This will recalculate each time you select or deselect a line.

05 SELECT BUBBLE

Tap whichever drill bubble you'd like in order to further investigate each of the lines you have selected.

In this example, tap on the Product Level 1 bubble.

06 RESULTS

Your enquiry will now reflect all of the lines you multi-selected on the previous page, broken down by the drill option selected.
