MedicsDocAssistant™ EHR for Behavioral Health:

Special Features for Behavioral Health Organizations

MedicsDocAssistant EHR for BH is feature-rich with a capacity to handle the very special needs of larger behavioral health organizations.

These organizations typically contain multiple providers ranging from MDs to counselors and clinicians covering the overall BH spectrum. Very often, these organization have dozens or even hundreds of caregivers serving thousands of people over multiple locations.

Programs generally involve long term care covering Psychiatric Evaluations, Medication Management, and individual / group / family psychotherapy.

Documentation standards are rigid, usually revolving around compliance requirements that are state-specific and payer-dependent.

A typical document flow for a large BH facility includes documents as shown below. Individualized document flows for children and adults are generally required, with documentation driving the periodic audits that organizations face.

The screenshot displays the MedicsDocAssistant V6.0 EHR interface. The top menu bar includes File, Scheduler, View, Accessories, Search, Tools, Designers, Reports, Window, and Help. The patient information section shows Patient Name: MAYNARD, CHARLES, Gender: Male, DOB: 01/01/1982, Insurance: 666666666 ARKANSAS BEST CORP., Phone(s): 8888888888, (H): 9999999999, Account#: 4299/1, and Scanned Images since last enc.: 0. The left sidebar contains a Navigation Pane with a calendar for September 2012 and a Task list including Inbox, Sent Items, Pending Tasks, Refills, Documents (27), Progress Notes, Forwarded Documents (14), and Test. The main window shows a list of appointments for Tuesday, September 25, 2012, with columns for Time Slot, Patient Name, and Exam Room. A pop-up window titled 'Select the visit type' is open, showing options for General Visit, Problem Plan, Progress Plan, and a list of BH-Initial Visit types including Initial Visit, Initial Eval, CBE, Child CBE, CBR, Child CBR, REOPEN, Intake Form, Psychiatric Initial Assessment, Psychiatric Followup, Clinician Initial Assessment, Clinician Followup, Psychological Evaluation, PsychEval Followup, and Session Notes. The bottom status bar indicates the user is 'Steven' logged in at 9/25/2012 6:19 PM.

11:30 AM	BEST, SCOTT	

Our Behavioral Health Services vertical for large inpatient and partial inpatient settings has a seamless process for documenting psychiatric and addictive disease treatment programs for children, adolescents, adults, and older adults.

The documentation and workflow is unique, and documentation follows the programs for long term care involving inpatient, partial inpatient and outpatient treatment. Extensive tracking for treatment plans / progress notes is typically a mandated requirement which the system handles.

The inpatient workflow is driven by the program to which the person is attached, each program having a unique set of forms that drive the clinical workflow.

Complex Medication dispensing and tracking is implemented within the application. MedicsDocAssistant EHR for BH has the ability to manage the broad spectrum of services for inpatient and ambulatory services.

- Mental Health and Substance Abuse Assessments
- Acute Psychiatric Hospital Care
- Sub acute / Intermediate Psychiatric Hospital Care
- Intensive Psychiatric Intensive Outpatient and Partial Hospital Tracking
- Substance Abuse Intensive Outpatient and Partial Hospital Tracking
- Outpatient Service
