

Release Note

Spotlight 2017.5

27 July 2017

The latest update to Spotlight Forecasting includes the following 'headline' enhancements:

🕒 Reimport Budget Data from Accounting System

Seamlessly import the latest budget edits or new financial year budget from the accounting system into Spotlight Forecasting using the new Update Data option. The imported budget values will overwrite existing budget data for the imported date range while retaining existing rules and adjustments created in your forecast and/or scenario. This update allows better collaboration with users who enter budget changes directly into the accounting system and need these reflected in the forecast/scenario.

🕒 Five Year Forecasts

Users can now create five year budgets, forecasts and scenarios in Spotlight Forecasting. Just update the forecast To Date in settings to extend the forecast period.
