CompuCom® | **MANAGED IT as a SERVICE**

IT Use Case: **Education**

Providing a foundation for scalable, emergent technology and greater collaboration in the classroom

THE CLIENT:

A charter school came needs help after receiving a technology innovation grant. With a once-in-a-lifetime opportunity to upgrade their IT systems, applications and equipment, they sought to work with an MSP who could advise, engineer, implement and support a new tech-forward learning environment for their faculty and students. Finding such a vendor could also alleviate the need to hire a CIO and on-site IT staff, allowing them to apply the grant towards building an innovative learning environment without allocating too much towards operational overhead costs.

THE PAIN:

- No access to CIO or network engineer for IT projects

- Struggle managing multiple vendors and advisors for applications, network infrastructure, compliance and equipment

- Need to upgrade their IT support without busting their budget

THE SOLUTION:

- CompuCom's Virtual CIO services can participate in strategy sessions with the school board to provide assessments, roadmaps, solution planning and more

- The benefit of consolidated IT support with CompuCom Managed Services

- Single-source for US-based IT support, 24/7/365 "live answer" help desk
