CompuCom® Jumpstart Program
Streamline your migration to Windows® 10

A growing number of businesses are making the move to Windows 10. It's easy to see why. Windows 10 addresses today's most pressing business concerns, spanning everything from enhanced security to increased efficiency.

CompuCom Knows Windows Migration

At CompuCom, we've been helping clients migrate to new versions of Windows for more than 20 years. In the last five years alone, we have helped our clients migrate more than one million PCs to Windows environments. And we can help you too.

There are two big questions you face now. The first one is *when* should I migrate? The second is *how* should I migrate? CompuCom offers a tested strategy that simplifies the process by creating a roadmap to address both of these questions. Learn how to fully leverage Windows 10 and take advantage of new technology from leaders such as Intel®.

Welcome to the CompuCom Jumpstart Program

The CompuCom Jumpstart Program uses a hands-on approach designed for any business taking its first steps toward a Windows 10 enterprise deployment. The program is staffed by technical experts ready to help you assess Windows 10 and Microsoft® Office through a series of briefings, demonstrations and exercises.

In the Jumpstart Program, you will review the in-place upgrade option and explore traditional deployment approaches to promote adoption of the best strategy for your business. You will work with your CompuCom team to develop a migration prototype that you will assess together, drawing on the results to prepare you for the entire migration journey.

CompuCom and Windows 10 Migration

CompuCom addresses the entire migration life cycle:

- Migration plan development
- Validation testing
- Persona modeling
- Selection criteria development
- Pilot development
- Asset recovery, reconditioning and redeployment
- Certified data destruction
- Device decommissioning and disposal
- Day-to-day support

CompuCom®

The Five-Day CompuCom Jumpstart Program

Day 1: CONDUCT
- Receive a Windows 10 overview
- Take part in a user-experience demo
- Address deployment
- Learn about the in-place upgrade in an isolated environment

Day 2: DEVELOP
- Compare management strategies
- Explore options:
  - Joining the cloud domain
  - Provisioning
  - Mobile device management
  - Windows Store for Business
  - Windows as a Service

Day 3: CREATE
- Participate in on-premise setup
- Work on a nonproduction image creation
- Dig deeper in the platform delivery

Day 4: TEST
- Address browser and app compatibility
- Learn about identity and security
- Consider options
  - Identity and security
  - Office 365®

Day 5: ESTABLISH
- Establish a vision for Windows 10 and Office based on the outcomes of the program
- Assess your current environment and roadmap
- Review activities you can start now to prepare your infrastructure
