STAY AHEAD WITH
SMART DATA

Take control of your data and get ahead of your smart factory with Averna's Data Management Software Tools. Easily produce customized reports, ensure assets are up-to-date and access all test data within a user-friendly and intuitive GUI. Focus on the information you need to succeed and eliminate any excess noise to remain proactive and make better business decisions.

Averna

Proligent Analytics

Proligent Analytics is the most powerful test data reporting tool available which is why it has become the industry standard over the last 15 years. Connect to as many or as few locations as required and keep all test results centralized in one place. Using over 50 web-based reports and charts, support engineers, operators and quality technicians optimize product quality, asset utilization and supply-chain initiatives, leading to better business decisions.

Proligent QuickView

Monitor your station test data using one simple tool and make better business decisions using Proligent QuickView's clear and precise dashboards. QuickView is easy to install and delivers powerful insight into local manufacturing using reports like Cpk analysis, throughput, cycle time, performance, quality, OEE, and many more!

Averna Deploy

Streamline smart factories using one simple tool. Averna Deploy ensures production is up to date by automatically running the latest software releases throughout all factories. Save time and prevent inaccuracies by having Averna Deploy watch over your business.

Averna Launch

Control your test data with the premiere test executive. Automatically run pre-determined tests, as defined by you, and access results in real-time or through easy-to-read reports. Flexible and configurable, Averna Launch accelerates production through reliable testing by providing users the information they need.
