

Finding Total Return in an Ultra-low Interest Rate Environment:

Your clients need to withdraw 4-5% a year, but interest rates are setting record lows. Here's what you can do to help get them there.

By: Dave Haviland, Portfolio Manager and Managing Partner

For decades most financial plans were created with withdrawal rates of 4 to 5% to meet clients' living needs. Yet today, the 10-year U.S. Treasury yield is hovering around 1.5% and **even the 30-year has a ~2% yield**. Worse yet, yields on equities have also trended lower with the dividend yield of the S&P 500® Index also around 2%. Today, almost \$20 trillion of international bonds have negative yields! Even junk bonds are yielding only ~5.5%. One can stretch for yield in relatively less liquid, riskier income-producing asset classes, but as the chart below shows, this may not work out so well for retirees or the rest of the boomers nearing retirement the next time there is a bear market. Clients don't want extra risk; they just want to live off their portfolio and avoid losing a significant portion of their assets along the way. **So, what can an advisor do?**

Source: Global Asset Allocation (Chapter 3) via mebfaber.com, Meb Faber, March 6, 2015. Bloomberg for the period 1973-2016. The data shown for Convertible Bonds, Preferred stock, High Yield Bonds and MLPs is sourced by Bloomberg. They use the same end date as the rest of the asset classes (12/31/16), but have different starting dates due to the fact the indices for these asset classes did not exist in 1973. Convertible bonds is for the time period starting on 6/17/1986, Preferred stock data starts 9/9/2003 and the MLP data begins 12/21/1995. The returns shown are "Nominal Returns" for the time period specified. For more information on what each asset class performance is represented by, please reference the disclosure pages. "EAFE" represents the regions of Europe, Australasia and Far East. Past performance is no guarantee of future results. An investment cannot be made directly in an index. Refer to the disclosure section for additional, important information.

My father started financial planning in 1981. When I joined him in the early 1990's, he taught me an important concept: Use **Total Return** when yield alone does not meet a client's living needs. The Total Return concept is simple: Instead of relying on dividends and interest alone, include a portion of the capital gains to meet client needs. Let's look at a hypothetical example:

Starting Portfolio Value	\$500,000	
Withdrawal need of client:	4%/year or \$20,000 to live	
Allocation:	50/50 portfolio	
Estimated Bond Yield	2.0%	\$5,000
Estimated Stock Yield	2.0%	\$5,000
Est. Capital Gain Supplement	4.0%	\$10,000
Total Annual Yield	\$20,000	

As you can see, this method can generate the money needed to meet the desired withdrawal rate. Then, the remainder of any capital gains remains in the portfolio to provide growth and/or to keep up with inflation.

On a practical basis, in a separate cash flow account, we

kept 1-3 years of income needs in one-, two- and three-year treasuries. This way, when markets faltered, we would **not have to take from the investment portfolio at market lows, exacerbating the losses.** Dividend, interest and gains remained in the investment account. Provided markets were not faltering though, once a year a withdrawal for the full amount was transferred to the income account and a new 3-year Treasury was purchased to refill the reserve. The matured Treasury in the cash flow account was used to meet client needs for the year with a periodic distribution.

If the accounts are set up to automatically distribute, all the advisor needs to do is make sure there is \$20,000 of cash raised in the investment account a few days before the transfer to the cash flow account.

On a separate note, the cash flow account can also be a “holding tank” for any low cost basis positions that need to be liquidated over time. Once sold, these proceeds can be added to the investment portfolio, but I digress.

The simple total return concept and process allows you to work with clients to help meet their withdrawal needs in this ultra-low interest rate environment. If you would like to learn how we seek total return, please click [here](#).
