Security for Unified Mobile Access

BioConnect offers a retro-fit solution for doors, data centers, network closets and data rooms. Enabling smart, rules-based access that leverages mobile 2-factor authentication. Unify existing physical and digital security investments and extend your approved IT tools to the door to protect your organization. BioConnect's unified security solution leverages multi-factor authentication used in our mobile application to confirm a user's digital identity. This provides an additional layer of security to physical access points. By serving step up notifications to the requester's mobile device on a flexible schedule or 24/7 for high-risk rooms, you can be sure only the right people are gaining access.

Security for Data Centers

Our biometric security for data centers solution was created to meet compliance and security standards with multi-factor authentication for server cabinets. Leverage biometric data to ensure the privacy and security of your center's most sensitive and critical data.

With BioConnect's solutions for the data center, it becomes easy to meet compliance standards. In conjunction with BioConnect Enterprise, CabinetShield can provide dual-factor biometric security at the cabinet. This provides you with an indisputable audit trail of access events all the way down to the server rack. Upgrading data center security at the server level can offer customers increased peace of mind and you a competitive advantage in the colocation market.

Security for Doors

With our out-of-the-box integrations into the top 80% of the access control market, BioConnect Enterprise can seamlessly add biometrics to your current access control infrastructure for strengthened trust and security.

We Integrate with Leading Access Control Partners

Our *Insights* feature allows systems administrators to collect data on user behaviors and optimize access control management procedures. System administrators will also be able to receive proactive alerts to avoid any downtime. The seamless synchronization of user enrollment over multiple devices facilitated by BioConnect Enterprise makes the deployment of biometrics across the enterprise simple.

Security for Applications

Whether it's for internal enterprise or client security, mobile biometrics can provide organizations with exact identity assurance of who is accessing secure applications. From high-risk transactions to login portals, BioConnect ID can be deployed to add biometric two-factor authentication to access points in your enterprise network. The solution hosts as a platform approach to biometrics which means you can use security tactics based on risk level. With BioConnect ID, your enterprise will have a full audit log of all transactions and access attempts of users provided, creating a layered defense against unauthorized or suspicious access.
