Biometric Access Control for the Modern Enterprise

With our out-of-the-box integrations, BioConnect Enterprise makes adding biometrics to your security solution easier than ever. Whether you are focused on letting the right people in, or keeping the wrong people out, BioConnect offers best in-class biometric devices and software for door security. The new *Insights* feature analyzes data to allow system administrators to have a better understanding of system health and optimize access control management procedures.

Security for Doors

Physical Security is the first line of defense an enterprise has, and your access control system is the most important security decision you'll make. BioConnect's security solution for doors uses best-in-class practices to increase security and identity assurance of access events within your enterprise.

How it Works

At the door, BioConnect provides a suite of world renowned biometric hardware with the highest quality in the market. At the software level, BioConnect Enterprise allows organizations to integrate biometrics into their existing access control systems, while allowing administrators to synchronize changes made to users across multiple access points.

In addition, our new *Insights* feature uses data collected during access events to provide you with real time insights on your security efforts and proactive suggestions to optimize access control management procedures. From alerts when devices are about to go off-line to enrollment and authentication issues with certain users, Insights keeps administrators informed the functionality of the entire network.

Hardware

BioConnect's array of Suprema biometric readers is equipped to provide you with an access control solution that works best for you. Whether it's single, two or multifactor authentication, Suprema's biometric readers integrated into BioConnect Enterprise allow you to configure your access control systems with ease.

BioConnect helps you determine which hardware will work best for your needs and develop a biometric security strategy unique to your organization. For both indoor and outdoor access points, the hardware can support face, fingerprint, card and pin as means of efficient and secure identity authentication.

BioConnect Enterprise

BioConnect Enterprise, makes it easy and cost effective to integrate biometrics into your current access control system. With BioConnect Enterprise you can manage and scale devices from a single integration point. With a single enrollment, users can gain access to any door on the network.

The *Insights* feature of BioConnect Enterprise, analyzes data to optimize access control management procedures. Administrators can receive proactive alerts about device health or when users are having difficulty authenticating. Insights can also diagnose and restore device network operational issues before they become larger problems. System administrators can make security and convenience a priority and allow Insights to help reduce unnecessary security escalations.

Use Case: CorMatrix and BioConnect

CorMatrix® Cardiovascular develops innovative biomaterial devices that harness the body's innate ability to repair its own damaged heart tissue. When relocating offices, they reached out to BioConnect for an effective access control solution.

Their solution consisted of integrating fingerprint readers into their access control system with BioConnect Enterprise. Now they can manage access control across multiple doors – all within a cost-effective, integrated package.
