Rob Douglas is the founder and CEO of BioConnect. Over the last fourteen years, he has been providing global market leadership in the biometric identity market. He was formerly Board Member, President and CEO of Bioscrypt Inc from 2003 to 2009 (BYT.TO) which was successfully sold to L-1 Identity Solutions (ID:NYSE) in 2008. Prior to that Rob was instrumental in shaping high growth technology companies as a former leader at IBM, Oracle and Siebel Systems. While at Siebel Systems, Rob led a hyper growth business unit from \$1m to \$110m in less than 4 years.

After leading the sale of Bioscrypt, Rob risked it all to start BioConnect and the "Quest for Rightful Identity." He felt it was his purpose in life to serve a cause bigger than a company. His founding belief was that the 7 billion people on this planet are better served to prove their rightful identity by being themselves for every transaction in life. What happens to your day when you cannot remember your password or have lost your key or card? The result is suspect identity. With his strong business acumen, Rob sees the impact to fraud and operational friction to corporations, healthcare, education and government organizations that would save billions in costs if they simply interacted with people, not suspect identity.

Rob also created BioConnect as a place to unleash the power and potential of millennials. Rob does not believe in the traditional employer/employee model. He believes in BioConnectors, not employees and BioConnect is a place for them to self-actualize; A place where innovation, collaboration and commitment lead to your strongest self, your most engaged life and offer the highest business impact and the discovery of your rightful self. He is a passionate and engaging leader and a strong public speaker with an unrelenting vision.

bioconnect.

BioConnect is a technology company with a fundamentally different approach to “identity.” It developed BioConnect ID, a translator of biometrics, to live at the core of every product offered by BioConnect. Why? Because BioConnect wants to empower a safer, more efficient world by transforming the nature of authentication and identification and without an identity that is rightfully yours, there is a gap in trust between organizations, places and people. Using technology from the leading biometrics providers, BioConnect ID takes elements such as your face, voice, eyes, and behaviours - any biometric type and acts as a translator for identity so your bank, your payments provider, your computer or your favourite app knows it's you.
