

BioConnect 4.8.0 Release Notes

Updates

- Advanced Enrollment Feature - activated by default and ensures that only high-quality fingerprint templates are captured at the time of enrollment. Disabling Advanced Enrollment can make it easier for some users to enroll, however, this may decrease the reliability of biometric matching.
- Enable Facility code sync from ACMs where this field sync is supported
- General UI / UX improvements
 - Mac Address information added in the column on Device management tab
 - Logging improvements to enable easier troubleshooting
 - Added ability to delete finger and face templates from User Management screen
 - Improved Search Functionality within the BioConnect client
- Security Updates
 - Standards based integrated Security Login - **Note** Customers using Active Directory authentication will no longer be able to use default Entertech Account as root admin.
 - Upgraded RabbitMQ to version 3.7.16
 - Upgraded Erlang to version 22.0
- New ACM versions support – for all ACMs, see ACM Integrations for BCE 4.8
 - Support for Open Options DNA Fusion 7.6
 - Support for RS2 7.0
 - Support for Genetec Security Center 5.8
 - Support for Amag Symmetry 9.0
 - Support for Paxton Net 6.0
 - Support for Lenel Onguard 7.5 - note that Onguard 7.5 and BCE 4.8 onwards should be installed on separate servers as per guidance from Lenel
- IPV6 Device Support for customers with BioConnect Enterprise CyberShield
- Bug Fixes and optimizations
