

BioConnect 4.9.0 Release Notes

Updates

- Change for Enterprise Architecture - SQL Replication architecture overhaul for a MAS/SAS configuration from the previous ACM Sync framework
 - To use Replication Features an existing SQL Service license will be required
 - Note that SQL Express does not meet the minimum requirements to use SQL replication.
 - This is only applicable for customers using BCE in an Enterprise configuration
 - This will result in increased uptime, allowing for SAS enrollments regardless of MAS status
- Support for new ACM versions
 - C-Cure 2.8
- Support for DNS configuration on all Suprema Gen 2 devices to communicate to BioConnect Enterprise Server
- BioConnect 4.9 now supports Genetec ClearID for visitor management
- Quality scores Across all templates - even previously captured ones should now have quality scores associated with them. This should help users with recognizing any bad enrollments
- Increased device administrator counts for Gen2 Suprema Devices from 10 to 1000.
- Other Bugs and Functionality improvements
