

Published Intranet

This diagram represents an ordered summary of tasks that an enterprise might go through when implementing a published intranet site with SharePoint Server 2010.

Not every project will go through all of the tasks, and some projects will move tasks from one development stage (such as planning) to another (such as evaluation) or merge stages. A project might also iterate through sections or through complete stages.

**Legend**

- Developer task
- IT Pro task
- Architect task
- Site designer task
- Content author/admin task
- Site visitor task
