

# Smart CRM Impact Analysis

## CRM Testing Challenge

Making changes to SAP CRM systems? How do you identify the impact of that change and ensure zero production defects? What should be tested and why? Integrate with third-party test solutions (e.g. HP ALM/QC) and discover what's actually testable.

---

## BSP Impact Analysis

LiveCompare's unique smart impact analysis identifies the most-at-risk CRM BSP applications to test in response to all SAP application changes.

LiveCompare identifies the specific BSP application views that should be exercised to validate changes.

Understand the impact on screens/views and drill down to side-by-side comparisons of changing repository and data dictionary objects.

---

## CRM Object Comparison

Run side-by-side comparison of BSP and BSP extension object types.

Smart attribute filters eliminate immaterial changes (fully configurable).

Analyze BSP apps fast to eliminate risk to production and achieve zero defects when you go-live.
