

Smart SAP Fiori App Testing

Fiori Testing Challenge

Changes to SAP Fiori apps can affect key business processes such as order-to-cash.

Testing everything is impractical and accepted to be inefficient and ineffective.

So how can we maintain development velocity and still achieve zero production defects?

Smart Impact Analysis

LiveCompare's unique, smart impact analysis identifies the most-at-risk Fiori applications to test in response to any SAP application change.

LiveCompare identifies the specific Fiori application views that should be exercised to verify the changes.

Understand the impact on screens/views and drill down to understand the actual changes in your code.

Fiori App Comparison

Run side-by-side comparison of Fiori app objects.

Smart attribute filters eliminate immaterial changes (fully configurable).

Analyze Fiori apps fast to eliminate risk to production and achieve zero defects when you go-live.
