

Smart Impact Analysis

Change is the one constant for SAP applications. Over time, organizations find they have created many test assets. Identifying the right test assets to use and highlighting gaps in coverage is challenging and time consuming.

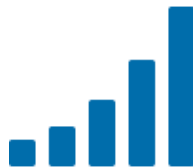

- It's difficult to identify the most at-risk stuff functionality.
- It's difficult to find relevant tests.
- It's difficult to identify gaps in test coverage.

Integrate With HPE ALM

- Populate business process test requirements.
- Cover requirements with newly created test plans.
- Identify valid test cases (and gaps) in response to smart impact analysis.
- Create test labs containing relevant tests.
- Report business criticality/risk in response to smart impact analysis.
- Assign covered requirements to a release/cycle.

Zero Defects

- LiveCompare tells you what to test and why.
- LiveCompare tells you what test assets to run and where there are gaps.
- LiveCompare maximises the health of automated test assets.

LiveCompare integrates with HPE ALM/Quality Center (QC) to cut testing effort by at least 85%.
